Advanced Wired and Wireless Networks Tadeusz A. Wysocki, Arek Dadej, Beata J. Wysocki, 2004-10-06 In Part I we bring ad hoc networking closer to the reality of practical use The focus is on more advanced scalable routing suitable for large networks directed flooding useful in information dissemination networks as well as self configuration and security issues important in practical deployments Part II illustrates the efforts towards development of advanced mobility support techniques beyond traditional mobile phone net and Mobile IP technologies [Signal Processing for Telecommunications and Multimedia](#) Tadeusz A. Wysocki, Bahram Honary, Beata J. Wysocki, 2004-10-01 The unprecedented growth in the range of multimedia services offered these days by modern telecommunication systems has been made possible only because of the advancements in signal processing technologies and algorithms In the area of telecommunications application of signal processing allows for new generations of systems to achieve performance close to theoretical limits while in the area of multimedia signal processing the underlying technology making possible realization of such applications that not so long ago were considered just a science fiction or were not even dreamed about We all learnt to adopt those achievements very quickly but often the research enabling their introduction takes many years and a lot of efforts This book presents a group of invited contributions some of which have been based on the papers presented at the International Symposium on DSP for Communication Systems held in Coolangatta on the Gold Coast Australia in December 2003 Part 1 of the book deals with applications of signal processing to transform what we hear or see to the form that is most suitable for transmission or storage for a future retrieval The first three chapters in this part are devoted to processing of speech and other audio signals The next two chapters consider image coding and compression while the last chapter of this part describes classification of video sequences in the MPEG domain **Distributed Multimedia Retrieval Strategies for Large Scale Networked Systems** Bharadwaj Veeravalli, Gerassimos Barlas, 2006-10-11 Several works on multimedia storage appear in literature today but very little if any have been devoted to handling long duration video retrieval over large scale networks Distributed retrieval of multimedia documents especially the long duration documents is an imperative step in rendering high quality high fidelity and cost effective services for network service providers Distributed Multimedia Retrieval Strategies for Large Scale Networked Systems presents an up to date research status in the domain of distributed video retrieval This professional book will include several different techniques that are in place for long duration video retrieval An experimentally tested technology under the JINI platform demonstrates a practical working system which serves as a feasibility study as well as the first step in realizing such a technology **Multimedia Video-Based Surveillance Systems** Gian Luca Foresti, Petri Mähönen, Carlo S. Regazzoni, 2000-09-30 Multimedia surveillance systems is an emerging field that includes signal and image processing communications and computer vision Multimedia Video Based Surveillance Systems Requirements Issues and Solutions combines the most recent research results from these areas for use by engineers and end

users involved in the design of surveillance systems in the fields of transportation and services The book covers emerging surveillance requirements including new digital sensors for real time acquisition of surveillance data low level image processing algorithms and event detection methods It also discusses problems related to knowledge representation in surveillance systems wireless and wired multimedia networks and a new generation of surveillance communication tools Timely information is presented on digital watermarking broadband multimedia transmission legal use of surveillance systems performance evaluation criteria and other new and emerging topics along with applications for transports and pedestrian monitoring The information contained in Multimedia Video Based Surveillance Systems Requirements Issues and Solutions bridges the distance between present practice and research findings and the book is an indispensable reference tool for professional engineers
