**Advances in Numerical Methods** Nikos Mastorakis, John Sakellaris, 2009-07-09 Recent Advances in Numerical Methods features contributions from distinguished researchers focused on significant aspects of current numerical methods and computational mathematics. This volume meets the need in the community for new computational methods that can solve complex scientific and engineering problems by presenting innovative methods that provide numerical solutions in effective computing times. Each chapter presents new and advanced methods and modern variations of known techniques that can solve difficult scientific problems efficiently and quickly.

[Recent Advances in Material, Manufacturing, and Machine Learning](#) Bjorn Schuller, Rajeev Gupta, Rakesh Mote, Abhishek Sharma, J.P. Giri, R.B. Chadge, 2024-06-17 The main aim of the 2nd international conference on recent advances in materials manufacturing and machine learning processes 2023

RAMMML 23 is to bring together all interested academic researchers, scientists, engineers, and technocrats and provide a platform for continuous improvement of manufacturing, machine learning, design, and materials engineering research. RAMMML 2023 received an overwhelming response with more than 530 full paper submissions. After due and careful scrutiny, about 120 of them have been selected for presentation. The papers submitted have been reviewed by experts from renowned institutions and subsequently the authors have revised the papers duly incorporating the suggestions of the reviewers. This has led to significant improvement in the quality of the contributions. Taylor Francis publications, CRC Press, have agreed to publish the selected proceedings of the conference in their book series of Advances in Mechanical Engineering and Interdisciplinary Sciences. This enables fast dissemination of the papers worldwide and increases the scope of visibility for the research contributions of the authors.

[Advanced Smart Information and Communication Technology and Systems](#) Mykhailo Ilchenko, Leonid Uryvsky, Larysa Globa, 2025-07-28 This book highlights the most important research areas in Information and Communication Technologies and their impact on digital society and environment sustainable development, namely the research in fields of Information and Communication Technologies, artificial intelligence in ICT, lunar missions, maintenance, security of data and services, smart robotic systems implementation in the digital environment, and mathematical modeling for practical and research tasks in communication and data processing fields provided by various groups of researchers from Germany and Ukraine in cooperation with scientists from different countries. The presented studies contain a discussion on the use of multi-cloud integration approaches, in particular based on methods of deep learning, practical implementation of the Internet of Things IoT, the modern study of V2V Communication and research in fields of mathematical modeling in applied problems. The book focuses on the basics of information and analytical activities in the digital global space to providing broadband Internet access without decreasing the quality of experience QoE level, improving services provision and system architecture with improving security. The study of modern communication and information technologies contains original works dealing with many aspects of their improvement and use for research that shows some

effective technological solutions that can be used for the implementation of novel cloud infrastructure and radio electronics systems. These results can be used in the implementation of novel systems and to promote the exchange of information in e-societies. Given its scope the book offers a valuable resource for scientists, lecturers, specialists working at enterprises and graduate and undergraduate students who engage with problems in Information and Communication Technologies as well as aspects of society and environment sustainable development.

### **Advanced Modeling in Computational Electromagnetic Compatibility**

Dragan Poljak, 2007-03-16. This book will enable readers to handle various EMC problems to develop their own EMC computational models in applications in research and industry and to better understand numerical methods developed and used by other researchers and engineers not only in EMC but in other areas of engineering.

**Applied Mechanics Reviews**, 1970. **Robotics, Vision and Control** Peter Corke, 2017-05-20. Robotic vision, the combination of robotics and computer vision, involves the application of computer algorithms to data acquired from sensors. The research community has developed a large body of such algorithms, but for a newcomer to the field, this can be quite daunting. For over 20 years, the author has maintained two open-source MATLAB Toolboxes, one for robotics and one for vision. They provide implementations of many important algorithms and allow users to work with real problems, not just trivial examples. This book makes the fundamental algorithms of robotics, vision, and control accessible to all. It weaves together theory, algorithms, and examples in a narrative that covers robotics and computer vision separately and together. Using the latest versions of the Toolboxes, the author shows how complex problems can be decomposed and solved using just a few simple lines of code. The topics covered are guided by real problems observed by the author over many years as a practitioner of both robotics and computer vision. It is written in an accessible but informative style, easy to read and absorb, and includes over 1000 MATLAB and Simulink examples and over 400 figures. The book is a real walk through the fundamentals of mobile robots, arm robots, then camera models, image processing, feature extraction, and multi-view geometry, and finally bringing it all together with an extensive discussion of visual servo systems.
