Robertson, 2014-11-07 This manual provides laboratory based learning experiences in perceptually and

psychosocially linked exercise assessment, prescription and programming. The primary pedagogic outcome is the ability to use applied theory and practice in perceptual and psychosocial exercise assessment and program design to promote the adoption and maintenance of a physically active lifestyle enhancing overall health fitness. Perceptual and psychosocial variables are presented in individual stand alone laboratory modules that can supplement existing curricula such as exercise and sport psychology, exercise physiology, exercise testing and prescription, and exercise training and conditioning. In addition, the complete modular set has a conceptual flow that allows its presentation as an entire laboratory based course. The laboratory modules are divided into three primary units: assessment, theoretical constructs, scales and procedures, tests, prescription, self regulation, performance and program evaluation. The manual uses a unique format in which case studies are embedded in the

conceptual flow of each lab module facilitating translation of laboratory results to real world application The manual concludes with a discussion of perceptually and psychosocially linked exercise prescription and programming applications in public health such as program monitoring and adherence *Encyclopedia of Associations* ,2004
