Simulating Visitor Behavior Kutay Güler,2016-02-29 The dynamics of the interplay between the visitor and the exhibition environment form complex circulation patterns As an exhibition designer developing an understanding of those dynamics is important for improving visitor satisfaction However an overwhelming number of

variables may transform the exhibition design process into educated guesswork Designing through trial and error is just not feasible In addition as a result of the nature of creating built environments modifying decisions later in the design process results in significant costs The designer has to rely on extensive experience to succeed Accordingly implementing a method for guidance into the design process should prove valuable for the designer This book discusses the development stages of a simulation application for visitor circulation in exhibition environments and presents the challenges of integrating a complex mathematical process into a visual and artistic process like exhibition design Those issues include understanding the individual stages of development building a theoretical foundation creating a simulation framework composing individual operations and implementing the finalized simulation into the design process Taken together this process sheds light on the underlying challenges of creating a functioning simulation The contents of this book will be beneficial not only for exhibition designers and simulation developers but also anyone interested in visitor behavior and spatial design
