Essential Guide to Growing Marijuana Indoor Dr John Tyler, 2019-12-08. How to grow cannabis indoors. Before you flex that green thumb of yours, understand that growing marijuana indoors presents a unique set of challenges for the new hobbyist, and the sheer volume of information available on the subject can be overwhelming. This guide to indoor cannabis growing will help simplify the process for you into clear, easy-to-digest sections designed to help the first-time grower get started. Growing marijuana indoors usually means a warehouse setting which requires artificial lighting and use of air conditioning and dehumidification systems. The intention of an indoor setup is to mimic the elements of the outdoors that facilitate plant growth while maintaining full control over every environmental parameter. High upfront costs, including the building structure, equipment, water, electricity, and other utilities, is the major downside of growing marijuana indoors for beginners.

Growing Cannabis Indoor: A Step by Step Guide to the Indoor Cultivation of Marijuana Dr Karl Burmer, 2019-03-24. Glad to know you're interested in growing your own cannabis plants for the first time. But before you flex that green thumb of yours, understand that growing marijuana indoors presents a unique set of challenges for the new hobbyist, and the sheer volume of information available on the subject can be overwhelming. The information on indoor cannabis growing in this book will help simplify the process for you into clear, easy-to-digest sections designed to help the first-time grower get started. The first step in setting up your personal cannabis grow is creating a suitable space in which to do it. This space doesn't need to be the typical grow room; it can be in a closet, tent, cabinet, spare room, or a corner in an unfinished basement. Just keep in mind that you'll need to tailor your equipment and plants to fit the space. When designing your space, you'll need to take into account not only the amount of room your plants will need but also your lights, ducting, fans, and other equipment, as well as leaving enough room for you to work. Cannabis plants can double, even triple, in size in the early stage of flowering, so make sure you have adequate head space. If your grow room is a cabinet, tent, or closet, you can simply open it up and remove the plants to work on them; otherwise, you'll need to make sure you leave yourself some elbow room. Make sure your space is easily sanitized; cleanliness is important when growing indoors, so easy-to-clean surfaces are a must. Carpeting, drapes, and raw wood are all difficult to clean, so avoid these materials if possible. The quality of light in your grow room will be the number one environmental factor in the quality and quantity of your cannabis yields, so it's a good idea

to choose the best lighting setup you can afford Plants need fresh air to thrive and carbon dioxide CO2 is essential to the process of photosynthesis This means you will need a steady stream of air flowing through your grow room easily achieved by means of an exhaust fan placed near the top of the room to remove the warmer air and a filtered air inlet on the opposite side near the floor You ll need to ensure that temperatures remain within a comfortable range for your plants between 70 degrees F and 85 degrees F when lights are on and between 58 degrees F and 70 degrees F when they are off Some varieties of cannabis generally indica strains prefer the lower side of the range while others are more tolerant of higher temperatures
