In the preface, Professor Tan sets himself an enormous challenge when he declares that the aim of the book is to "provide a concise, practical, and reasonably comprehensive guide on research methods.... [for] ... readers who are just starting out on their research journey." Any respectable university library would have several shelf metres of books that specialise in one or a few aspects of research methods and the thought of condensing all that into a single, practical volume is strictly for masochists.

Yet, in some respects, Professor Tan actually achieves the impossible. The section on quantitative analysis is both accessible and comprehensive and should be a "must" for any researcher that ever contemplates opening a statistical package. In a very practical way it explains the assumptions behind the techniques and all the tests required before getting to the analysis itself. This section is worth the price of the book on its own.

However, success comes at a price – in this case the quantitative analysis section of the book occupies almost a third of the space available which means that other concepts and methods suffer from an imposed brevity and there is very little about fundamental philosophy behind the different approaches. Important subjects like constructing surveys or qualitative analysis, which many people have written books about, gets a few pages while others like ethics are barely mentioned.

Doing Academic Research Ted Gournelos, Joshua R. Hammonds, Maridath A. Wilson, 2019 Online student resource material can be accessed under the Support Materials tab at <https://www.routledge.com/9780367207939> Doing Academic Research is a concise, accessible and tightly organized overview of the research process in the humanities, social sciences and business. Conducting effective scholarly research can seem like a frustrating, confusing and unpleasant experience. Early researchers often have inconsistent knowledge and experience and can become overwhelmed, reducing their ability to produce high quality work. Rather than a book about research, this is a practical guide to doing research. It guides budding researchers along the process of developing an effective workflow, where to go for help and how to actually complete the project. The book addresses diversity in abilities, interest, discipline and ways of knowing by focusing not just on the process of conducting any one method in detail, but also on the ways in which someone might choose a research method and conduct it successfully. Finally, it emphasizes accessibility and approachability through real world examples, key insights, tips and tricks from active researchers. This book is a highly useful addition to both content area courses and research methods courses, as well as a practical guide for graduate students and independent scholars interested in publishing their research.
