Trenchless Technology* Steven R. Kramer,William J. McDonald,James C. Thomson,2012-12-06 In the past decade the field of  
trenchless technology has expanded rapidly in products equipment and utilization This expansion would not have occurred  
without a strong increase in economic incentives to the user Because the operating environment has changed trenchless  
technology is often the preferred alternative to traditional methods of digging holes and installing conduits The  
infrastructure in which we live has become more congested and has to be shared by several users In addition the cost of  
restoring a road or landscaped area after construction may be higher than the cost of installing the conduit These factors add  
to the need for trenchless technology the ability to dig holes without disturbing the surface In some ways trenchless  
technology is a futuristic concept Ruth Krauss in a children's book of definitions wrote A Hole Is to Dig But this statement is not  
necessarily true Today a hole could be to bore Trenchless technology is not new But it certainly has become the buzzword of  
the construction industry and it appears that it will have a growing impact in the way contractors utilities and others install  
new facilities Methods to bore horizontal holes were practiced as early as the 1800s but this technology has greatly changed  
Today's tools include sophisticated drilling methods state of the art power systems and electronic guidance techniques These  
tools can bore faster safer and more accurately and in many instances more economically than open cut methods Technology  
has played an important role in these advances but economics has become the driving force in making these systems popular
