**Improvement of Oil-seed and Industrial Crops by Induced Mutations ; Proceedings** Vienna Advisory Group Meeting on the Use of Induced Mutations for the Improvemnt of Oil-Seed and other Industrial Crops (17-21 Novembr, 1980),1982 *Improvement of Oil-seed and Industrial Crops by Induced Mutations* International Atomic Energy Agency,Food and Agriculture Organization of the United Nations,1982 Improvement of Oil-seed and Industrial Crops by Induced Mutations ,1982 *Industrial Crops Improvement* Nitish Kumar,2025-01-24 This book explores the different conventional and biotechnological techniques for enhancing the productivity of industrial crops The growth of the industrial crop sector has become a widespread global phenomenon that helps rural livelihoods and propels economic development Contrary to staple crops industrial crops are cultivated with the intention of being sold for a high profit Industrial crops are a crucial component of plans to increase food security because they offer the required stability during periods of economic or climatic crises In order to maintain their livelihood and food security many farm households balance the advantages and disadvantages of producing food crops and industrial crops Avoiding land use rivalry with crops grown for food and feed production is crucial when considering growing industrial crops on agricultural soils The past several years have seen a rise in the awareness of scholars and decision makers regarding the immediate and long term effects of climatic variables on economic food security social and political results In order to sustain food production with more climate resilient crops for future generations genetic variety both natural and artificial is crucial Therefore addressing the problem of finding a compromise between increasing crop production under a specific set of conditions and reducing the chance of crop failure

when conditions change is important and difficult An assortment of meteorological conditions is used to grow industrial crops Many are subsistence farmers who run extremely tiny farms with very little agricultural input to produce products that can be sold It is a significant problem to preserve the variety of these crops and handle all crop culture related difficulties By offering the knowledge required to minimize the dangers of industrial crop breeding through managing genetic diversity the author believe that this book will primarily address a need that has not yet been met in this and other grower groups

M. van Harten,1998-06-25 An essential and comprehensive summary for all plant breeders      Improvement of Grain Legume Production Using Induced Mutations Joint FAO/IAEA Division of Isotope and Radiation Applications of Atomic Energy for Food and Agricultural Development,1988      朝日新聞社 (Japan),1900      Plant Mutagenesis Nitish Kumar,2024-04-22 This book emphasizes recent developments in the use of mutation technologies for crop plant improvement and ultimately sustainable development Plant breeders use genetic variation which is created by plant induced mutation to create new and improved cultivars The development of improved cultivars is a productive and optimistic agricultural strategy for economic and environmental sustainability since it ensures high yield stability enhances soil health and poses no environmental risks Understanding mutation induction and exploring its uses have paved the road for improving genetic diversity for different plants and agronomic features and advanced gene discovery for diverse qualities that aid in sustainable development Plant mutation breeding imitates spontaneous mutation

the primary force driving evolution by using a plant's own genetic resources instead of genetic transformation. In order to develop beneficial agricultural features this strategy focuses on the application of various chemical and physical mutagens in conjunction with biotechnologies. In order to survive in challenging environments increase nutritional value, fight diseases and pests grow in salty soils and utilize water and nutrients more effectively new varieties of plants are developed. This approach has significantly boosted the economies of nations like China, India, Japan, Pakistan and the USA. As of right now the strategy has produced and disseminated more than 3600 mutant types in the majority of crop plants having a significant economic impact. This book discusses several mutation induction techniques, mutant screening, genome editing, the haploid breeding system for mutations as well as genomic developments and mutant gene identification. Plant breeders, researchers and students in the fields of plant sciences, agriculture and food science will find this instructive book to be of great help.

International Atomic Energy Agency, 1991 Proceedings of a symposium jointly organized by the IAEA and FAO Vienna 18-22 June 1990. The technology of mutation induction has been accepted by plant breeders as a valuable additional tool for creating improved cultivars for agriculture and horticulture. It was amply demonstrated at the symposium that this technique has been applied with great success in many annual seed propagated crops such as rice, barley, wheat, cotton, soybean and pea. The technological problems identified primarily concerned vegetatively propagated crops and in general the logistic difficulties in identifying desirable mutants in large mutagenized populations.      *Gamma Field Symposia* ,      *International Atomic Energy Agency Publications* International Atomic Energy Agency, 1985      INIS Atomindeks , 1988      **Bibliography of Agriculture** ,1992-06      *Biotechnology and Mutation Breeding* ,1991
