Communities, Landscapes, and Interaction in Neolithic Greece Apostolos Sarris, Evita Kalogiropoulou, Tuna Kalayci, Evagelia Karimali, 2018-08-17 The last three decades have witnessed a period of growing archaeological activity in Greece that have enhanced our awareness of the diversity and variability of ancient communities. New sites offer rich datasets from many aspects of material culture that challenge traditional perceptions and suggest complex interpretations of the past. This volume provides a synthetic overview of recent developments in the study of Neolithic Greece and reconsiders the dynamics of human environment interactions while recording the growing diversity in layers of social organization. It fills an essential lacuna in contemporary literature and enhances our understanding of the Neolithic communities in the Greek Peninsula. **Computational Methods for Microbiome Analysis** Joao Carlos Setubal, Jens Stoye, Bas E. Interactions of Life , Intra- and inter-species interactions in microbial communities Luis Raul Comolli, Birgit Luef, Manfred Auer, 2015-03-03 Recent developments in various OMICs fields have revolutionized our understanding of the vast diversity and ubiquity of microbes in the biosphere. However, most of the current paradigms of microbial cell biology and our view of how microbes live and what they are capable of are derived from in vitro experiments on isolated strains. Even the co-culturing of mixed species to interrogate community behavior is relatively new. But the majority of microorganisms lives in complex communities in natural environments under varying conditions and often cannot be cultivated. Unless we obtain a detailed understanding of the near native 3D ultrastructure of individual community members, the 3D spatial community organization, their metabolic interdependences, coordinated gene expression and the spatial organization of their macromolecular machines, inventories as well as their communication strategies, we won't be able to truly understand microbial community life. How spatial and also temporal organization in cell-cell interactions are achieved remains largely elusive. For example, a key question in microbial ecology is what mechanisms microbes employ to respond when faced with prey, competitors or predators and changes in external factors. Specifically, to what degree do bacterial cells in biofilms act individually or with coordinated responses? What are the spatial extent and coherence of coordinated responses? In addition, networks linking organisms across a dynamic range of physical constraints and connections should provide the basis for linked evolutionary changes under pressure from a changing environment. Therefore, we need to investigate microbial responses to altered or adverse environmental conditions including phages, predators and competitors and their macromolecular metabolic responses according to their spatial organization. We envision a diverse set of tools including optical, spectroscopic, chemical and ultrastructural imaging techniques that will be utilized to address questions regarding e.g. intra and inter-organism interactions linked to ultrastructure and correlated adaptive responses in gene expression, physiological and metabolic states as a consequence of the alterations of their environment. Clearly, strategies for co-evolution

and in general the display of adaptive strategies of a microbial network as a response to the altered environment are of high interest While a special focus will be placed on terrestrial sole species or mixed biofilms we are also interested in aquatic systems biofilms in general and microbes living in symbiosis In this Research Topic we wish to summarize and review results investigating interactions and possibly networks between microbes of the same or different species their co occurrence as well as spatiotemporal patterns of distribution Our goal is to include a broad spectrum of experimental and theoretical contributions from research and review articles to hypothesis and theory aiming at understanding microbial interactions at a systems level *The Ecology of Bird Communities: Volume 1, Foundations and Patterns* John A. Hahn,Ana Pineda,Mysore V.

Tejesvi,Ainhua Martinez-Medina,2020-01-29 Aboveground interactions between plants and organisms have served as a foundation of ecological and evolutionary theories Accumulating evidence suggests that interactions that occur belowground can have immense influence on eco evolutionary dynamics of plants Despite the increasing awareness among scientists of the importance of belowground interactions for plant performance and community dynamics they have received considerably less theoretical and empirical attention compared to aboveground interactions In this eBook we aim to highlight the overlooked roles of belowground interactions and outline their myriad ecological roles from affecting soil health through impacting plant interactions with above ground fauna This eBook with 18 articles and an Editorial includes conceptual contribution together with original research work The chapters are exploring the roles of belowground biotic interactions in the context of ecological processes both below and above ground Holt Science & Technology Holt Rinehart & Winston,2004

Microbiome-Host Interactions D. Dhanasekaran,Dhiraj Paul,N. Amaresan,A. Sankaranarayanan,Yogesh S. Shouche,2021-03-31 Microbiota are a promising and fascinating subject in biology because they integrate the microbial communities in humans animals plants and the environment In humans microbiota are associated with the gut skin and genital oral and respiratory organs The plant microbial community is referred to as holobiont and it is influential in the maintenance and health of plants which themselves play a role in animal health and the environment The contents of Microbiome Host Interactions cover all areas as well as new research trends in the fields of plant animal human and environmental microbiome interactions The book covers microbiota in polar soil environments in health and disease in *Caenorhabditis elegans* and in agroecosystems as well as in rice root and actinorhizal root nodules speleothems and marine shallow water hydrothermal vents Moreover this book provides comprehensive accounts of advanced next generation DNA sequencing metagenomic techniques high throughput 16S rRNA sequencing and understanding nucleic acid sequence data from fungal algal viral bacterial cyanobacterial actinobacterial and archaeal communities using QIIME software Quantitative

Overcoming Inequalities in Schools and Learning Communities: Innovative Education for a New Century Rocio Garcia-Carrion, Roseli Rodrigues De Mello, Arnetha F. Ball, 2020-03-24 Educational inequalities have strongly impacted disadvantaged and underserved populations such as indigenous Roma migrant children students with disabilities and those affected by poverty A wide array of research has contributed to explaining the mechanisms and effects of inequalities in the achievement patterns dropout rates disengagement in the school experiences of children and youth traditionally excluded Research also suggests the negative consequences for child development including cognitive language and social emotional functioning of poverty and lack of quality education in the early years Consequently the current unequal access to optimal learning environments for every single child to succeed in education and to have a better life perpetuates the exclusion and neglects their right to education for those minorities This Research Topic aims at moving beyond causes and shed light upon effective solutions by providing successful pathways for integration and inclusion of the learners most heavily affected Scholars worldwide are looking for successful actions with children youth and communities of learners historically underserved to overcome educational and social exclusion These transformative approaches go beyond the deficit thinking and are grounded in theories empirical evidence and multidisciplinary interventions oriented towards achieving social impact which refers to the extent to which those actions have contributed to improve a societal challenge The international network of Schools as Learning Communities is advancing knowledge on deepening and expanding the impact of what has been defined as Successful Educational Actions SEAs that is those interventions that improve students achievement and social cohesion and inclusion in many diverse contexts regardless the socioeconomic national and cultural environment of schools Drawing on the evidence generated by this network of researchers to address the global challenge of inequality by studying educational actions oriented towards achieving social impact and potentially transferrable to other contexts this Research Topic aims at deepening on this approach In short our purpose is that the contributions included in this Research Topic contribute to reduce educational and social inequalities and especially benefit those populations most in need
