### **On Logical, Algebraic, and Probabilistic Aspects of Fuzzy Set Theory** Susanne

Saminger-Platz, Radko Mesiar, 2016-01-11 The book is a collection of contributions by leading experts developed around traditional themes discussed at the annual Linz Seminars on Fuzzy Set Theory. The different chapters have been written by former PhD students, colleagues, co-authors and friends of Peter Klement, a leading researcher and the organizer of the Linz Seminars on Fuzzy Set Theory. The book also includes advanced findings on topics inspired by Klement's research activities concerning copulas, measures and integrals as well as aggregation problems. Some of the chapters reflect personal views and controversial aspects of traditional topics while others deal with deep mathematical theories such as the algebraic and logical foundations of fuzzy set theory and fuzzy logic. Originally thought as an homage to Peter Klement, the book also represents an advanced reference guide to the mathematical theories related to fuzzy logic and fuzzy set theory with the potential to stimulate important discussions on new research directions in the field

### **Petr Hájek on Mathematical Fuzzy Logic**

Franco Montagna, 2014-09-23 This volume celebrates the work of Petr Hájek on mathematical fuzzy logic and presents how his efforts have influenced prominent logicians who are continuing his work. The book opens with a discussion on Hájek's contribution to mathematical fuzzy logic and with a scientific biography of him. It progresses to include two articles with a foundation flavour that demonstrate some important aspects of Hájek's production, namely a paper on the development of fuzzy sets and another paper on some fuzzy versions of set theory and arithmetic. Articles in the volume also focus on the treatment of vagueness, building connections between Hájek's favorite fuzzy logic and linguistic models of vagueness. Other articles introduce alternative notions of consequence relation, namely the preservation of truth degrees, which is discussed in a general context and the differential semantics. For the latter, a surprisingly strong standard completeness theorem is proved. Another contribution also looks at two principles valid in classical logic and characterizes the three main t-norm logics in terms of these principles. Other articles with an algebraic flavour offer a summary of the applications of lattice-ordered groups to many-valued logic and to quantum logic, as well as an investigation of prelinearity in varieties of pointed lattice-ordered algebras that satisfy a weak form of distributivity and have a very weak implication. The last part of the volume contains an article on probabilistic modal logics defined over MTL-chains, a topic that Hájek discussed in his celebrated work *Metamathematics of Fuzzy Logic* and another one where the authors, besides offering unexpected premises such as proposing to call Hájek's basic fuzzy logic HL instead of BL, propose a very weak system called SL as a candidate for the role of the really basic fuzzy logic. The paper also provides a generalization of the prelinearity axiom which was investigated by Hájek in
