Interface Between The Psychodynamic And Behavioral Therapies:

The Interface Between the Psychodynamic and Behavioral Therapies Judd Marmor, 2012-12-06 It is sobering to reflect that it has been nearly fifty years since Thomas French's article on the Interrelations between Psychoanalysis and the Experimental Work of Pavlov representing the first psychoanalyst to bridge the gap between the theories of conditioning was published. In his paper French clearly delineated the manner and directions in which these two points of view might enrich each other. Regrettably his openness to new ideas has not been characteristic of most schools of psychiatry thought which have tended instead to develop an unfortunate degree of insularity. This has occurred despite the obvious reality that the bio-social psychological nature of man is such that no one theory or discipline is likely in the foreseeable future to explain much less predict all of the complexities of human behavior. All too often disputing theoreticians like the fabled blind men describing the elephant assume that the whole is just a gigantic magnification of the parts with which they are in contact. When treatment strategies are extrapolated from such narrow views more often than not they fail to achieve the parsimony of effort, the breadth of application and the maximum of efficiency that one would hope for. In our opinion it is impossible adequately to conceptualize personality development, symptom formation or responses to psychotherapy without taking into consideration theories of conflict as well as those of learning.

Handbook of Psychotherapy Integration John C. Norcross, Marvin R. Goldfried, 2003-09-11 This volume originally published in 1992 by Basic Books provides for the first time a comprehensive state-of-the-art description of therapeutic integration and its clinical practices by the leading proponents of the movement. After presenting the concepts, history, research and belief structure of psychotherapy integration, the book considers two exemplars of theoretical integration: technical eclecticism and common factors. The authors review integrative therapies for specific disorders including anxiety, depression and borderline personality disorder along with integrative treatment modalities such as combining individual and family therapy and integrating pharmacotherapy and psychotherapy. The book concludes with a section on training and a look at future directions.

Textbook of Psychoanalysis Glen O. Gabbard, Bonnie E. Litowitz, Paul Williams, 2012-09-24 The second edition of this groundbreaking text represents a complete departure from the structure and format of its predecessor Though still exhaustive in scope and designed to provide a knowledge base for a broad audience from the beginning student to the seasoned analyst or academician this revision emphasizes the interdisciplinary nature of psychoanalytic thought and boldly focuses on current American psychoanalysis in all its conceptual and clinical diversity This approach reflects the perspective of the two new co editors whose backgrounds in linguistics and social anthropology inform and enrich their clinical practice and the six new section editors who themselves reflect the diversity of backgrounds and thinking in contemporary American psychoanalysis The book begins with Freud and his circle and the origins of psychoanalysis and goes on to explore its development in the post Freud era This general introduction orients the reader and helps to contextualize the six sections that follow The most important tenets of psychoanalysis are defined and described in the Core Concepts section including theories of motivation unconscious processes transference and countertransference defense and resistance and gender and sexuality These eight chapters constitute an excellent introduction to the field of psychoanalysis The Schools of Thought section features chapters on the most influential theories from object relations to self psychology to attachment theory and relational psychoanalysis and includes the contributions of Klein and Bion and of Lacan Rather than making developmental theory a separate section as in the last edition developmental themes now permeate the Schools of Thought section and illuminate other theories and topics throughout the edition Taking a more clinical turn the Treatment and Technique section addresses critical subjects such as transference and countertransference theories of therapeutic action process interpretation and resistance termination and reanalysis combined psychoanalysis and psychopharmacotherapy child analysis ethics and the relationship between psychoanalysis and psychodynamic psychotherapy A substantive utterly current and meticulously referenced section on Research provides an in depth discussion of outcome process and developmental research The section entitled Psychoanalysis and Other Disciplines takes the reader on a fascinating tour through the many fields that psychoanalysis has enriched and been enriched by including the neurosciences philosophy anthropology race ethnicity literature visual arts film and music A comprehensive Glossary completes this indispensable text The Textbook of Psychoanalysis is the only
