NIMS has long worked on developing advanced steel techniques, namely producing advanced steels by using only simple alloying elements such as carbon, manganese and silicon, and also by utilizing steel scrap. The hope is that this approach will lead to a technology of a so-called steel-to-steel recycling process with the ultimate goal of a recycling process such as an automotive steel-to-automotive steel recycling process to take the place of the current cascade-type recycling system. The main idea is to utilize ultra-grain refining structures and hetero structures as well as martensite structures. In particular, the focus of this book is on tensile strength and toughness of advanced steels from both the fundamental and engineering points of view. Fundamentally, a unique approach to analysis is taken based on fracture surface energy as effective grain size is employed to better understand the mechanism of property improvement. From the engineering point of view, in fracture toughness, such factors as crack tip opening displacement (CTOD) of advanced steels are

, 1995 The multi institutional interdisciplinary research program of the Steel Research Group SRG has centered on the development of a systems approach for the design of advanced high performance steels using computer aided modelling Initial long range studies involved the development of the theoretical foundations underlying strength toughness and hydrogen resistance Mechanistic based computational models include the prediction of martensite start temperatures in high alloy steels multicomponent coarsening kinetics in non ideal non dilute systems and the martensitic transformation volume change in multicomponent systems Modelling has successfully related the peak hardness in secondary hardening steels to the coherent driving force of the M₂C carbide in para equilibrium with transient cementite Additionally the precipitation time scale has been related to the multicomponent coarsening coefficient of the M₂C carbide with respect to the half completion state Within a systems design framework these models have been successfully applied to the design of high performance alloys including stainless bearing steels advanced armor steels and high hardness gear steels **Advanced High-strength Steels** Mahmoud Y. Demeri, 2024 Advanced High Strength Steels Science Technology and Applications is the second edition of the original book first published by ASM in 2013 The book covered the science and technology of developing and applying new grades of advanced high strength steels AHSS with original superior attributes that can compete with alternative lightweight materials such as aluminum magnesium polymers and composites based on enhanced mass reduction fuel economy safe
