**Advanced Transport Phenomena** P. A. Ramachandran,2014-09-25 Integrated modern approach to transport phenomena for graduate students featuring examples and computational solutions to develop practical problem solving skills

**Advanced Transport Phenomena** P. A. Ramachandran,2014 Transport and Surface Phenomena Kamil Wichterle,Marek Vecer,2020-04-22 Transport and Surface Phenomena provides an overview of the key transfers taking place in reactions and explores how calculations of momentum energy and mass transfers can help researchers develop the most appropriate cost effective solutions to chemical problems Beginning with a thorough overview of the nature of transport phenomena the book goes on to explore balances in transport phenomena including key equations for assessing balances before concluding by outlining mathematical methods for solving the transfer equations Drawing on the experience of its expert authors it is an accessible introduction to the field for students researchers and professionals working in chemical engineering The book and is also ideal for those in related fields such as physical chemistry energy engineering and materials science for whom a deeper understanding of these interactions could enhance their work Presents fundamental background knowledge and experimental methods in a clear and accessible style Cements information through problems for the reader to solve making the book ideal for learning teaching and refreshing subject knowledge Outlines mathematical approaches for solving energy transfers to show applications of the key equations in practice **MUS - Mathematimus -**

**Hyperelliptical Geometry** Stenio Musich,2024-03-25 M U S Mathematical Uniform Space is a new number of pi representing the reality of the Universe in which we live With this number we created a new geometry Hyperelliptical Geometry which will provide the unification of physics thus uniting the Theory of Relativity and Quantum Theory A new geometry for a new Mathematics and a new Physics ISBN 978 65 00 98107 0 **Membrane Characterization** José Ignacio Calvo Díez, Antonio Hernández Giménez,2024-10-21 Membrane technology has become an essential tool in many industrial processes in which the separation or fractionation of various species is necessary to obtain or recover high value added products In these processes the synthetic membranes usually play a filter role being characterized by the size of the pores present in it which delimit the size of the molecules to be separated It is therefore necessary to have a precise knowledge of the characteristic size of said pores In this book the main techniques that can be used to determine the mean pore size and the pore size distribution of a synthetic membrane are analyzed and discussed from the point of view of their theoretical basis with special attention to equipment that should be used for each technique as well as reviewing their advantages and disadvantages Through this text the researcher or responsible of the quality control at membrane manufacturing companies will be able to know decide properly which of the porosimetric techniques is more adequate for the knowledge that needs to be obtained from their filters **Mass Transfer Processes** P. A. Ramachandran,2018-02-19 The All in One Guide to Mass Transport Phenomena From Theory to Examples and Computation Mass transfer processes exist in practically all engineering

fields and many biological systems understanding them is essential for all chemical engineering students and for practitioners in a broad range of practices such as biomedical engineering environmental engineering material engineering and the like Mass Transfer Processes combines a modern accessible introduction to modeling and computing these processes with demonstrations of their application in designing reactors and separation systems P A Ramachandran's integrated approach balances all the knowledge readers need to be effective rather than merely paying lip service to some crucial topics He covers both analytical and numerical solutions to mass transfer problems demonstrating numerical problem solving with widely used software packages including MATLAB and CHEBFUN Throughout he links theory to realistic examples both traditional and contemporary Theory examples and in depth coverage of differential macroscopic and mesoscopic modeling Physical chemistry aspects of diffusion phenomena Film models for calculating local mass transfer rates and diffusional interaction in gas solid and gas liquid reaction systems Application of mass transfer models in rate based separation processes and systems with simultaneous heat and mass transfer Convective mass transfer empirical correlation internal and external laminar flows and turbulent flows Heterogeneous systems from laminar flow reactors diffusion reaction models reactive membranes and electrochemical reactors Computations of mass transfer effects in multicomponent systems Solid gas noncatalytic reactions for chemical metallurgical environmental and electronic processes Applications in electrochemical and biomedical systems Design calculations for humidification drying and condensation systems and membrane based separations Analysis of adsorption chromatography electrodialysis and electrophoresis
