## **Advanced Transport Systems Analysis Modeling And Evaluation Of Performances:**

Advanced Transport Systems Milan Janić, 2014-01-11 This book provides a systematic analysis modeling and evaluation of the performance of advanced transport systems. It offers an innovative approach by presenting a multidimensional examination of the performance of advanced transport systems and transport modes useful for both theoretical and practical purposes. Advanced transport systems for the twenty-first century are characterized by the superiority of one or several of their infrastructural, technical, technological, operational, economic, environmental, social, and policy performances as compared to their conventional counterparts. The advanced transport systems considered include Bus Rapid Transit (BRT) and Personal Rapid Transit (PRT) systems in urban areas; electric and fuel cell passenger cars; high-speed tilting trains; High-Speed Rail (HSR); TransRapid; Maglev; TRM; Evacuated Tube Transport system (ETT); advanced commercial subsonic and Supersonic Transport Aircraft (STA) conventionally and Liquid Hydrogen (LH2) fuelled commercial air transportation; advanced Air Traffic Control (ATC) technologies and procedures for increasing the airport runway capacity; Underground Freight Transport (UFT) systems in urban areas; Long Intermodal Freight Trains (LIFTs); road mega-trucks; large advanced container ships and freight cargo aircraft; and advanced freight goods collection distribution networks. This book is intended for postgraduates, researchers, professionals, and policy makers working in the transport industry.

Transport Systems Milan Janic, 2017-03-27 The transport sector consists of different modes of transport, each serving a growing demand for transporting people and goods. This growing demand, on the one hand, needs expanding the systems capacity, and on the other hand, increasing the corresponding economic efficiency, effectiveness, and environmental and social friendliness. This implies development of a greener, i.e., a more sustainable transport sector. The book describes the current and prospective state of the art, analytical modelling, conceptual planning, and multi-criteria evaluation of the selected cases of transport systems operated by different transport modes such as road, rail, sea, air, and intermodal. As such, the book is unique in addressing these three important aspects of dealing with transport systems before implementation of their particular components means by the selected cases. It will be particularly useful for readers from the academia and the professionals from the transport sector.
