Brompton Bicycle English Edition:

Bicycle Design Tony Hadland, Hans-Erhard Lessing, 2016-10-07 An authoritative and comprehensive account of the bicycle's two hundred year evolution. The bicycle ranks as one of the most enduring most widely used vehicles in the world with more than a billion produced during almost two hundred years of cycling history. This book offers an authoritative and comprehensive account of the bicycle's technical and historical evolution from the earliest velocipedes invented to fill the need for horseless transport during a shortage of oats to modern racing bikes, mountain bikes and recumbents. It traces the bicycle's development in terms of materials, ergonomics and vehicle physics as carried out by inventors, entrepreneurs and manufacturers. Written by two leading bicycle historians and generously illustrated with historic drawings, designs and photographs. Bicycle Design describes the key stages in the evolution of the bicycle beginning with the counterintuitive idea of balancing on two wheels in line through the development of tension spoked wheels, indirect drives employing levers, pulleys, chains and chainwheels and pneumatic tires. The authors examine the further development of the bicycle for such specific purposes as racing, portability and all terrain use and they describe the evolution of bicycle components including seats, transmission, brakes, lights, at first candle based and carriers, racks, panniers, saddlebags, child seats and sidecars. They consider not only commercially successful designs but also commercial failures that pointed the way to future technological developments. And they debunk some myths about bicycles for example the mistaken but often cited idea that Leonardo sketched a chain drive bike in his notebooks. Despite the bicycle's long history and mass appeal its technological history has been neglected. This volume with its engaging and wide ranging coverage fills that gap. It will be the starting point for all future histories of the bicycle.

Made In Britain Evan Davis, 2011-05-19 What are countries famous for making? For Japan the answer might be electronic goods. For Germany automobiles. For France perhaps a Louis Vuitton bag. But what about Britain? Here Evan Davis sets himself the task of finding out. Offering a fascinating look at our manufacturing industries and revealing the various companies that might not be household names but are very much world leaders in their fields, he shows how we have learnt to specialise in high end and niche areas that are the envy of the world. Taking in our disappointments and successes, Made in Britain is a brilliantly readable tour of our economic history exploring the curious blend of resilience, innovation and economic free thinking that makes us who we are.

Electric Motorcycles and Bicycles Kevin Desmond, 2018-12-31 Beginning in 1881 isolated prototypes of electric tricycles and bicycles were patented and sometimes tested. Limited editions followed in the 1940s but it was not until the lithium ion battery became available in the first decade of this century that urban pedelecs and more powerful open road motorcycles, sometimes with speeds of over 200 mph, became possible and increasingly popular. Today's ever growing fleets of one wheel, two wheel and three wheel light electric vehicles can now be counted in the hundreds of millions. In this third installment of his electric transport history series, the author covers the lives of the innovative engineers who have developed these e-wheelers.
