Advanced Polymer Nanoparticles Synthesis And Surface Modifications:

Advanced Polymer Nanoparticles Vikas Mittal, 2010-07-13 Polymer nanoparticles are an important class of polymeric materials that are required for a number of commercial applications. This book presents the tremendous developments in the synthesis and surface modification techniques to generate advanced polymer nanoparticles. After a brief introduction to polymer latex technology, the text discusses emulsion polymerization, miniemulsion polymerization, as well as batch, semi-batch, and continuous polymerization. It then details the synthesis and surface modification of various types of polymer nanoparticles, including polymers with core-shell morphologies, dendrimers, modified polymer nanoparticles, and porous and hollow polymer nanoparticles. *Heterophase Polymerization* Hugo Hernandez, Klaus Tauer, 2021-04-04

Heterophase polymerization is a century-old technology with a wide range of relevant industrial applications, including coatings, adhesives, rubbers, and many other specialized biomedical and high-performance materials. However, due to its multiscale complexity, it still remains a challenging research topic. It is a broad field covering all heterogeneous polymerization processes that result in polymer dispersions. Its technical realizations comprise emulsion polymerization, dispersion polymerization, suspension polymerization, miniemulsion polymerization, microemulsion polymerization, and others. This book is devoted to the science and technology of heterophase polymerization, considering it a generic term as well as an umbrella expression for all of its technical realizations. It presents from a modern perspective the basic concepts and principles required to understand the kinetics and thermodynamics of heterophase polymerization at the atomistic, molecular, macromolecular, supramolecular, colloidal, microscopic, mesoscopic, and macroscopic scales. It critically discusses the important physicochemical mechanisms involved in heterophase polymerization, such as nucleation, particle aggregation, mass transfer, swelling, spontaneous emulsification, and polymerization kinetics, along with the experimental evidences at hand. **Polymer Adhesion, Friction, and Lubrication** Hongbo Zeng, 2013-02-07 Specifically dedicated to polymer and biopolymer systems, *Polymer Adhesion, Friction, and Lubrication* guides readers to the scratch wear and lubrication properties of polymers and the engineering applications from biomedical research to automotive engineering. Author Hongbo Zeng details different experimental and theoretical methods used to probe static and dynamic properties of polymer materials and biomacromolecular systems. Topics include the use of atomic force microscopy (AFM) to analyze nanotribology, polymer thin films and brushes, nanoparticles, rubber and tire technology, synovial joint lubrication, adhesion in paper products, bioMEMS, and electrorheological fluids.
