Fisher,William J. Horrey,John D. Lee,Michael A. Regan,2020-05-31 Handbook of Human Factors for Automated Connected and Intelligent Vehicles Subject Guide Ergonomics Human Factors Automobile crashes are the seventh leading cause of death worldwide resulting in over 1 25 million deaths yearly Automated connected and intelligent vehicles have the potential to reduce crashes significantly while also reducing congestion carbon emissions and increasing accessibility However the

transition could take decades. This new handbook serves a diverse community of stakeholders including human factors researchers, transportation engineers, regulatory agencies, automobile manufacturers, fleet operators, driving instructors, vulnerable road users and special populations. It provides information about the human driver, other road users and human-automation interaction in a single integrated compendium in order to ensure that automated, connected and intelligent vehicles reach their full potential. Features: Addresses four major transportation challenges: crashes, congestion, carbon emissions and accessibility from a human factors perspective; Discusses the role of the human operator relevant to the design, regulation and evaluation of automated, connected and intelligent vehicles; Offers a broad treatment of the critical issues and technological advances for the designing of transportation systems with the driver in mind; Presents an understanding of the human factors issues that are central to the public acceptance of these automated, connected and intelligent vehicles; Leverages lessons from other domains in understanding human interactions with automation; Sets the stage for future research by defining the space of unexplored questions.

Integrating Human Factors Methods and Systems Thinking for Transport Analysis and Design Gemma J. M. Read, Vanessa Beanland, Michael G. Lenné, Neville A. Stanton, Paul M.

Salmon, 2017-07-26. Governments and road safety agencies around the world have either introduced or are considering safe system strategies a long overdue acknowledgement that different elements of the road system contribute to road safety outcomes. Human factors approaches have a leading role here in both conceptualising the road system as a complex sociotechnical system and in providing practical approaches to support true systems based countermeasures. This book illustrates the potential for integrating contemporary systems based human factors methods with modern day driving assessment methods such as vehicle instrumentation and driving simulation to understand and enhance performance in modern day road transport systems. The book outlines why a fundamental paradigm shift is needed in the way these systems are designed and operated and illustrates how a wide range of accepted human factors approaches can be applied successfully to road transport to revolutionise the countermeasure design process. The practical illustrations of these human factors methods are applied to a long standing road and rail safety issue rail level crossings where the road and rail systems intersect. The final chapter of the book highlights the utility of the human factors approach to reducing road trauma and discusses future applications of the approach.

Systems and Computer Science Loan Dumitache, 2012-08-22 The conception of real time control networks taking into account as an integrating approach both the specific aspects of information and knowledge processing and the dynamic and energetic particularities of physical processes and of communication networks is representing one of the newest scientific and technological challenges. The new paradigm of Cyber Physical Systems CPS reflects this tendency and will certainly change the evolution of the technology with major social and economic impact. This book presents significant results in the field of process control and advanced information and knowledge processing with applications in the fields of robotics, biotechnology, environment, energy, transportation, et al. It introduces intelligent control concepts and strategies as well as real time implementation aspects for complex control approaches. One of the sections is dedicated to the complex problem of designing software systems for distributed information processing networks. Problems as complexity and specific instruments for modeling and control are also presented in a group of papers which identifies a large opening towards the new generation of CPS. The book is structured so as to ensure a good equilibrium between conceptual and applicative aspects.

People in Control Jan Noyes, Matthew Bransby, 2001-12-19 Drawn from a June 1999 conference of the same name 18 papers explore the role of human error in causing accidents and inefficiencies in automated processes and discuss engineering solutions to the design of systems and processes. Emphasizing case studies and examples from the transport and process control industries the papers are organized into the topic areas of human performance methods and control room design. Individual topics include situation awareness, teamworking, training for control room tasks, allocation of human and machine functions, task analysis, development of a railway ergonomics control assessment package, design of alarm systems, control desks in power generation and integrated platform management system design for naval warships.

Recent Advances in Intelligent Control Systems Wen Yu, 2009-05-27 Recent Advances in Intelligent Control Systems gathers contributions from workers around the world and presents them in four categories according to the style of control employed: fuzzy control, neural control, fuzzy neural control and intelligent control.

The contributions illustrate the interdisciplinary antecedents of intelligent control and contrast its results with those of more traditional control methods. A variety of design examples drawn primarily from robotics and mechatronics but also representing process and production engineering, large civil structures, network flows and others provide instances of the application of computational intelligence for control. Presenting state of the art research this collection will be of benefit to researchers in automatic control, automation, computer science, especially artificial intelligence and mechatronics, while graduate students and practicing control engineers working with intelligent systems will find it a good source of study material.
