## **Advances In Large Margin Classifiers Neural Information Processing:**

**Advances in Large Margin Classifiers** Alexander J. Smola, 2000 The book provides an overview of recent developments in large margin classifiers examines connections with other methods e g Bayesian inference and identifies strengths and weaknesses of the method as well as directions for future research The concept of large margins is a unifying principle for the analysis of many different approaches to the classification of data from examples including boosting mathematical programming neural networks and support vector machines The fact that it is the margin or confidence level of a classification that is a scale parameter rather than a raw training error that matters has become a key tool for dealing with classifiers This book shows how this idea applies to both the theoretical analysis and the design of algorithms The book provides an overview of recent developments in large margin classifiers examines connections with other methods e g Bayesian inference and identifies strengths and weaknesses of the method as well as directions for future research Among the contributors are Manfred Oppel Vladimir Vapnik and Grace Wahba *Machine Learning and Knowledge Discovery in Databases* Hendrik Blockeel, Kristian Kersting, Siegfried Nijssen, Filip Železný, 2013-08-28 This three volume set LNAI 8188 8189 and 8190 constitutes the refereed proceedings of the European Conference on Machine Learning and Knowledge Discovery in Databases ECML PKDD 2013 held in Prague Czech Republic in September 2013 The 111 revised research papers presented together with 5 invited talks were carefully reviewed and selected from 447 submissions The papers are organized in topical sections on reinforcement learning Markov decision processes active learning and optimization learning from sequences time series and spatio temporal data data streams graphs and networks social network analysis natural language processing and information extraction ranking and recommender systems matrix and tensor analysis structured output prediction multi label and multi task learning transfer learning bayesian learning graphical models nearest neighbor methods ensembles statistical learning semi supervised learning unsupervised learning subgroup discovery outlier detection and anomaly detection privacy and security evaluation applications and medical applications **Advanced Lectures on Machine Learning** Shoham Mendelson, Alexander J. Smola, 2003-07-01 Machine Learning has become a key enabling technology for many engineering applications and theoretical problems alike To further discussions and to disseminate new results a Summer School was held on February 11-22 2002 at the Australian National University The current book contains a collection of the main talks held during those two weeks in February presented as tutorial chapters on topics such as Boosting Data Mining Kernel Methods Logic Reinforcement Learning and Statistical Learning Theory The papers provide an in depth overview of these exciting new areas contain a large set of references and thereby provide the interested reader with further information to start or to pursue his own research in these directions Complementary to the book a recorded video of the presentations during the Summer School can be obtained at <http://mlg.anu.edu.au/summer2002> It is our hope that graduate students lecturers and researchers alike will find this book useful in learning and teaching Machine Learning thereby

Smola, 2018-06-05 A comprehensive introduction to Support Vector Machines and related kernel methods In the 1990s a new type of learning algorithm was developed based on results from statistical learning theory the Support Vector Machine SVM This gave rise to a new class of theoretically elegant learning machines that use a central concept of SVMs kernels for a number of learning tasks Kernel machines provide a modular framework that can be adapted to different tasks and domains by the choice of the kernel function and the base algorithm They are replacing neural networks in a variety of fields including engineering information retrieval and bioinformatics Learning with Kernels provides an introduction to SVMs and related kernel methods Although the book begins with the basics it also includes the latest research It provides all of the concepts necessary to enable a reader equipped with some basic mathematical knowledge to enter the world of machine learning using theoretically well founded yet easy to use kernel algorithms and to understand and apply the powerful algorithms that have been developed over the last few years **Computational Learning Theory** David Helmbold, Bob Williamson, 2001-07-04 This book constitutes the refereed proceedings of the 14th Annual and 5th European Conferences on Computational Learning Theory COLT EuroCOLT 2001 held in Amsterdam The Netherlands in July 2001 The 40 revised full papers presented together with one invited paper were carefully reviewed and selected from a total of 69 submissions All current aspects of computational learning and its applications in a variety of fields are addressed Proceedings ,2003 Advances in Neural Networks--ISNN ... ,2005 Proceedings, ACM Multimedia ... ,2002 **South African Statistical Journal** ,2004 **Neural Computation** ,2006 *Index of Conference Proceedings* British Library.
