Doran,2013 The emergence and refinement of techniques in molecular biology has changed our perceptions of medicine agriculture and environmental management This textbook presents the principles of bioprocess engineering in a way that is accessible to biological scientists *Biochemical Engineering* Debabrata Das,Debayan Das,2019-07-15 All engineering disciplines have been developed from the basic sciences Science gives us the information on the reasoning behind new product development whereas engineering is the application of science to manufacture the product at the commercial level Biological processes involve various biomolecules which come from living sources It is now possible to manipulate DNA to get the desired changes in biochemical processes This book provides students the knowledge that will enable them to contribute in various professional fields including bioprocess development modeling and simulation and environmental engineering It includes the analysis of different upstream and downstream processes The chapters are organized in broad engineering subdisciplines such as mass and energy balances reaction theory using both chemical and enzymatic reactions microbial cell growth kinetics transport phenomena different control systems used in the fermentation industry and case studies of some industrial fermentation processes Each chapter begins with a fundamental explanation for general readers and ends with in depth scientific details suitable for expert readers The book also includes the solutions to about 100 problems *Bioprocess Engineering Principles* Pauline M. Doran,2012-04-23 This welcome new edition discusses bioprocess engineering from the perspective of biology students It includes a great deal of new material and has been extensively revised and expanded These updates strengthen the book and maintain its position as the book of choice for senior undergraduates and graduates seeking to move from biochemistry microbiology molecular biology to bioprocess engineering All chapters thoroughly revised for current developments with over 200 pgs of new material including significant new content in Metabolic Engineering Sustainable Bioprocessing Membrane Filtration Turbulence and Impeller Design Downstream Processing Oxygen Transfer Systems Over 150 new problems and worked examples More than 100 new illustrations **Pullulan** Shakeel Ahmed,Aisverya Soundararajan,2020-12-30 Pullulan is a polysaccharide produced by the fungus *Aureobasidium pullulans* and possesses some distinct properties such as excellent transparent film forming ability moisture absorptivity water solubility non toxicity and adhesivity These properties allow pullulan to find potential applications in various industries such as pharmaceuticals cosmetics food and health care This book presents the chemistry and properties of pullulan along with the method of its production at the laboratory level It discusses the structural engineering processing methods and versatile applications of pullulan as well as highlights the challenges that still have to be overcome for its large scale production This unique book comprehensively summarizes many of the recent research findings on pullulan contributed by leading experts in this research domain It is a useful reference book for scientists academicians researchers chemists technologists graduate

and postgraduate students and general readers who are interested in pullulan *Textile-Based Advanced Materials* Thomas Bechtold, Avinash P. Manian, 2021-03-17 Developments in the science and technology of textiles are not only limited to apparel and fashion. Certainly there are research efforts aimed at improving the construction and processing of textiles for clothing such as studies on cleaner production to reduce environmental impact increasing the utilization of fibers and process chemicals from renewable resources and on the recycling of materials from post consumer waste apparel back into the manufacturing of new clothing articles. In addition technological concepts developed for the creation of clothing over the centuries are now being investigated for use in a diverse array of fields such as in the manufacture of engineering composites personal protective equipment and medicine. Further developments in other fields such as electronics nanotechnology and information and communication technologies are being investigated for their incorporation into apparel and clothing to create smart textiles. The aim of this Special Issue is to put together a collection of scientific reports on such efforts to highlight the range of scientific and technological issues that are being targeted and the ingenuity of the methodologies employed to find answers. It is hoped that readers of this issue will come away with an appreciation of the research being conducted in this area and perhaps gain inspiration for their own scientific endeavors.

Problem Solving in Chemical and Biochemical Engineering with POLYMATH, Excel, and MATLAB Michael B. Cutlip, Mordechai Shacham, 2008

Problem Solving in Chemical and Biochemical Engineering with POLYMATH Excel and MATLAB Second Edition is a valuable resource and companion that integrates the use of numerical problem solving in the three most widely used software packages POLYMATH Microsoft Excel and MATLAB. Recently developed POLYMATH capabilities allow the automatic creation of Excel spreadsheets and the generation of MATLAB code for problem solutions. Students and professional engineers will appreciate the ease with which problems can be entered into POLYMATH and then solved independently in all three software packages while taking full advantage of the unique capabilities within each package. The book includes more than 170 problems requiring numerical solutions. This greatly expanded and revised second edition includes new chapters on getting started with and using Excel and MATLAB. It also places special emphasis on biochemical engineering with a major chapter on the subject and with the integration of biochemical problems throughout the book. General Topics and Subject Areas Organized by Chapter: Introduction to Problem Solving with Mathematical Software Packages Basic Principles and Calculations Regression and Correlation of Data Introduction to Problem Solving with Excel Introduction to Problem Solving with MATLAB Advanced Problem Solving Techniques Thermodynamics Fluid Mechanics Heat Transfer Mass Transfer Chemical Reaction Engineering Phase Equilibrium and Distillation Process Dynamics and Control Biochemical Engineering Practical Aspects of Problem Solving Capabilities Simultaneous Linear Equations Simultaneous Nonlinear Equations Linear Multiple Linear and Nonlinear Regressions with Statistical Analyses Partial Differential Equations Using the Numerical Method of Lines Curve Fitting by Polynomials with Statistical Analysis Simultaneous Ordinary Differential Equations

Including Problems Involving Stiff Systems Differential Algebraic Equations and Parameter Estimation in Systems of Ordinary Differential Equations The Book's Web Site <http://www.problemsolvingbook.com> Provides solved and partially solved problem files for all three software packages plus additional materials Describes discounted purchase options for educational version of POLYMATH available to book purchasers Includes detailed selected problem solutions in Maple Mathcad and Mathematica

Bioprocess Engineering T. K. Ghose, 1989 Bioprocess Engineering Wolf R. Vieth, 1994-04-14 Using an engineering perspective this work offers a coherent synthesis of biokinetics and biocatalysis demonstrating their integration with reactor issues in bioprocesses thereby tracing the rapid current evolution of biotechnology Commences with simple enzyme and cellbased process kinetic models and continues on to stress the kinetics of gene expression and product formation with a unifying emphasis on operon concepts *Process Dynamics and Control* Dale E.
