*Renewable Energy* Anne Elizabeth Maczulak, 2010. Green Technology is an eight volume set that examines the relationship between human activities and their sometimes harmful consequences for the environment and explores new methods of repairing and restoring the Earth. Approaching environmental issues confronting society from a technological perspective has spawned significant controversy and the books in this set present all sides of the debate. Designed to complement science curricula, the set also covers relevant history and new green technologies and innovations that will contribute to the field in the future. Renewable Energy Sources and Methods examines the current technologies in renewable energy, a critical subject given that the world increases its energy consumption between 1 and 3 percent each year.

Considering the current rate of energy consumption and the consequences of continuing at this rate, the book explains how the main conventional sources of energy including coal, oil and gas affect economies worldwide. The book also focuses on the remarkable diversity of ideas and innovations in the field of alternative energy. Sidebars, figures and case studies enhance fundamental concepts and examine urgent issues related to the future of the environment. The volume includes information on alternative vehicles, biomass, the biorefining industry, clean energy, converting solid waste to energy, Earth's energy sources, green building design and construction, recycling, water conservation, worldwide energy programs. The book contains more than 40 color photographs and line illustrations, five appendixes, a glossary, a detailed list of print and Internet resources and an index. *Green Technology* is essential for high school students, teachers and general readers who seek information on the important issues that affect the environment worldwide. Sustainable Energy Systems and Applications

Ibrahim Dincer, Calin Zamfirescu, 2011-11-05 The concept of sustainable development was first introduced by the Brundtland Commission almost 20 years ago and has received increased attention during the past decade. It is now an essential part of any energy activities. This is a research based textbook which can be used by senior undergraduate students, graduate students, engineers, practitioners, scientists, researchers in the area of sustainable energy systems and aimed to address some key pillars: better efficiency, better cost effectiveness, better use of energy resources, better environment, better energy security and better sustainable development. It also includes some cutting edge topics such as hydrogen and fuel cells, renewable clean combustion technologies, CO<sub>2</sub> abatement technologies and some potential tools: exergy, constructal theory, etc. for design analysis and performance improvement.

Powering Our Future Alternative Energy Institute, Kimberly K.

Smith, 2005 With nearly all of the world's energy consumption dependent on non-renewable resources, *Powering Our Future* challenges consumers to support changes that will create sustainable energy in the future. The four biggest energy sources: oil, natural gas, coal and uranium currently power our earth. What would happen to our society if we experienced severe shortages of one or more of these resources? Such a glimpse into the future may become reality sooner than we think. Oil production is soon expected to begin a rapid descent with natural gas in close pursuit. *Powering Our Future* is an educational tool that opens the door to a future fueled by sustainable renewable energy. Consumers will learn: How our world has become dependent on four non-renewable resources; How each resource impacts us politically, economically and environmentally; How renewable resources such as hydrogen, fuel cells, wind power, solar energy, hydropower and more are waiting in the wings; How the transition to renewable resources will take place offering economically stable and environmentally safe choices. *Powering Our Future* is a solution oriented guide that will empower you to make more informed choices as a voter, a contributor to a global economy and a citizen of the earth.
