Thinking Through Twentieth-Century Architecture Nicholas Ray, 2023-02-08 Shortlisted for the Architectural Book Awards 2024 *Thinking Through Twentieth Century Architecture* connects the practice of architecture with its recent history and its theoretical origins those philosophical ideas that lay behind modernism and its aftermath By analyzing in straightforward and jargon free language the genesis of modernism and the complex reactions to it the book clarifies a continuing debate It has been specifically written to connect issues of theory history and contemporary practice and to allow students to make these connections easily This is a history of twentieth century architecture written with close critical attention to the theories that lie behind the works described Importantly unlike other historical accounts it does not take sides and urge the reader to identify with one strand of thinking or style of architecture at the expense of others but it presents a dispassionate view with persuasive arguments on behalf of different positions It pursues the history of European and American architecture chronologically but the history is interwoven with the philosophical ideas that informed both writers and architects and are essential for its understanding The book is relevant to current issues of contemporary practice and education showing that philosophical issues are fundamental and those relating to design decisions never go away It includes 200 illustrations and will appeal to all those interested in twentieth century architecture and to architectural students

Twenty-Five+ Buildings Every Architect Should Understand Simon Unwin, 2023-11-03 The underlying theme of *Twenty Five Buildings Every Architect Should Understand* is the relationship of architecture to the human being how it frames our lives and orchestrates our experience how it can help us make sense of the world and contribute to our sense of identity and place Exploring these dimensions through a wide range of case studies that illustrate the rich diversity of twentieth and twenty first century architecture this book is essential reading for every architect With the addition of numerous shorter analyses this new edition covers an even greater range of architectural ideas providing students and architects with further inspiration for exploration in their own design work Architects live by ideas But where do they come from And how do they shape buildings There is no one right way to do architecture This book illustrates many Its aim is to explore the rich diversity of architectural creativity by analysing a wide range of examples to extract the ideas behind them *Twenty Five Buildings Every Architect Should Understand* is a companion to Simon Unwin's *Analysing Architecture* the

Primitive Jo Odgers, Flora Samuel, Adam Sharr, 2006-09-27 This innovative edited collection charts the rise fall and possible futures of the word primitive The word primitive is fundamental to the discipline of architecture in the west providing a convenient starting point for the many myths of architecture s origins Since the almost legendary 1970s conference on the Primitive with the advent of post modernism and in particular post colonialism the word has fallen from favour in many disciplines Despite this architects continue to use the word to mythologize and reify the practice of simplicity Primitive includes contributions from some of today s leading architectural commentators including Dalibor Vesely Adrian Forty David Leatherbarrow Richard Weston and Richard Coyne Structured around five sections Negotiating Origins Urban Myths Questioning Colonial Constructs Making Marks and Primitive Futures the essays highlight the problematic nature of ideas of the primitive engage with contemporary debate in the field of post colonialism and respond to a burgeoning interest in the non expert architecture This now controversial subject remains for better or worse intrinsic to the very structure of Modernism and deeply embedded in architectural theory Considering a broad range of approaches this book provides a rounded past present and future of the word primitive in the architectural sphere

Precedented Environmental Futures Colin Porteous, 2019-04-17 This book addresses the built environment through the lens of environmental architecture and in a holistic manner It moves gradually from psychophysiology and thinking doing feeling modalities through environmental criteria to environmental modulation concluding with a debate around mitigation and adaptation Much use is made of re interpreting past quotations seen as relevant for environmental architecture No definitive conclusions are reached but rather broad discursive messages are offered The text will have lasting luminance for new generations involved with the built environment
