**Frenemies in Platform Markets** Ron Adner, Jianqing Chen, Feng Zhu, 2015 We study the compatibility decisions of two competing platforms that generate profits through both hardware sales and royalties from content sales We consider a game theoretic model in which the platform hardware may offer different standalone utilities to users who have different preferences over the two platforms We find that incentives to establish one way compatibility the platform with smaller standalone value allows users of the competing platform to access its content can arise from the difference in their profit foci As the difference in the standalone utilities increases royalties from content sales become less important to the platform with greater standalone value but becomes more important for the other platform

Compatibility increases asymmetry between the platforms profit foci and when the difference in the standalone utilities is sufficiently large yields greater profits for both platforms We further show that social welfare is greater under one way compatibility than under incompatibility and there exist no incentives for either platform to establish one way compatibility the other way round We investigate as well how factors such as different platform production costs exclusive content and endogenized royalty rates affect compatibility incentives

students and peers all without sacrificing good teaching or lowering standards to improve student outcomes Achieving these goals requires understanding how the indigenous population of this new shoreline is different These students aren't necessarily smarter or technologically superior but they do have different expectations Their approaches to learning are shaped by social networking and other forms of convenient computer enabled and mobile communication devices by instant access to an over abundance of information by technologies that have conferred the ability to personalize and customize their world to a degree never seen before and by time shifting and time slicing As well as understanding students assumptions and expectations we have no option but to familiarize ourselves with the characteristics and applications of Web 2.0 essentially a new mind set about how to use Internet technologies around the concepts of social computing social media content sharing filtering and user experience Roger McHaney not only deftly analyzes how Web 2.0 is shaping the attitudes and motivations of today's students but guides us through the topography of existing and emerging digital media environments applications platforms and devices not least the impact of e readers and tablets on the future of the textbook and the potential they have for disrupting teacher student relationships and if appropriately used for engaging students in their learning This book argues for nothing less than a reinvention of higher education to meet these new realities Just adding technology to our teaching practices will not suffice McHaney calls for a complete rethinking of our practice of teaching to meet the needs of this emerging world and envisioning ourselves as connected co learners with our students *Kindle Buffet* Steve
