Handbook of Fire & Explosion Protection Engineering Principles for Oil, Gas, Chemical, & Related Facilities Dennis P. Nolan, 1996-12-31 The security and economic stability of many nations and multinational oil companies are highly dependent on the safe and uninterrupted operation of their oil gas and chemical facilities One of the most critical impacts that can occur to these operations are fires and explosions from accidental or political incidents This publication is intended as a general engineering handbook and reference guideline for those personnel involved with fire and explosion protection aspects of critical hydrocarbon facilities Design guidelines and specifications of major small and independent oil companies as well as information from engineering firms and published industry references have been reviewed to assist in its preparation Some of the latest published practices and research into fire and explosions have also been mentioned **Fire Safety Engineering Design of Structures, Third Edition** John A. Purkiss, Long-Yuan Li, 2013-12-05 Designing structures to withstand the effects of fire is challenging and requires a series of complex design decisions This third edition of Fire Safety Engineering Design of Structures provides practising fire safety engineers with the tools to design structures to withstand fires This text details standard industry design decisions and offers expert design advice with relevant historical data It includes extensive data on materials behaviour and modeling concrete steel composite steel concrete timber masonry and aluminium While weighted to the fire sections of the Eurocodes this book also includes historical data to allow older structures to be assessed It extensively covers fire damage investigation and includes as far back as possible the background to code methods to enable the engineer to better understand why certain procedures are adopted What's new in the Third Edition An overview in the first chapter explains the types of design decisions required for optimum fire performance of a structure and demonstrates the effect of temperature rise on structural performance of structural elements It extends the sections on less common engineering materials The section on computer modelling now includes material on coupled heat and mass transfer enabling a better understanding of the phenomenon of spalling in concrete It includes a series of worked examples and provides an extensive reference section Readers require a working knowledge of structural mechanics and methods of structural design at ambient conditions and are helped by some understanding of thermodynamics of heat transfer This book serves as a resource for engineers working in the field of fire safety consultants who regularly carry out full fire safety design for structure and researchers seeking background information Dr John Purkiss is a chartered civil and structural engineer consultant and former lecturer in structural engineering at Aston University UK Dr Long Yuan Li is Professor of Structural Engineering at Plymouth University UK and a Fellow of the Institution of Structural Engineers **Hazardous Building Materials** Steve Curwell, Bob Fox, Morris Greenberg, Chris March, 2002-09-11 This new edition provides a detailed reference source of the use in residential buildings of materials known or suspected to harm health and the environment Alternative materials are evaluated using unique data sheets which compare environmental impact cost health safety and technical
