Information and Communication Technologies in Support of the Tourism Industry

Pease, Wayne, Rowe, Michelle, Cooper, Malcolm, 2007-02-28 This book examines the process of transformation as it relates to the tourism industry and the changes to that industry from modern electronic communications It covers not only geographically supportive technologies in communication but also in terms of culture economics marketing social and regional issues Provided by publisher

eTourism case studies: Roman Egger, Dimitrios Buhalis, 2011-01-03 eTourism Case Studies bridges the gap in contemporary literature by carefully examining marketing and management issues of many international companies that have successfully implemented eTourism solutions Divided into six sections this book explores the newest developments in this field introducing and discussing emerging trends approaches models and paradigms providing visions for the future of eTourism and supporting discussion and elaboration with the help of thorough pedagogic aids With contributions from leading global experts both from the industry and academia each case follows a rigid structure with features such as bulleted summaries and review questions as well as each section having its own thorough introduction and conclusion written by the editors highlighting the key issues and theories This is the first book of its kind to bring together cases highlighting best practice and methods for exploiting ICT in the tourism industry from international market leaders

Looking Beyond the Runway Nawal K. Taneja, 2016-12-05 The global airline industry facing significant changes and discontinuity is prompted and forced to deal with a new normal Who would have imagined a few years ago that a significant percentage of consumers in the US now prefer to fly low cost airlines instead of full service airlines because they perceive the product to be better airlines would generate up to a third of their total income from non ticket revenue many low cost airlines would add complexity to their original simple business models through the development of code share agreements the use of global distribution systems and travel agents to distribute their seats Jetstar a low cost subsidiary of Qantas would grow faster and be more profitable than its parent a survey carried out by Ryanair would show that 42 percent of passengers would be willing to stand on short one hour flights if they could pay 50 percent less than seated passengers passengers could pay as little as US 2 000 for a transatlantic Business Class ticket on top brand airlines Lufthansa would have ownership in airlines based in Austria Belgium Italy Switzerland Turkey the UK and the US and that it would continue to pursue equity ownership in airlines based in Poland and Scandinavia or the Japanese and Canadian governments would struggle to find different ways to bail out their heretofore flag carriers To deal with this upcoming new normal airlines have

to go beyond their short term circumstantial strategies they need strategic renewal of their ageing business model In this candidly written book Nawal Taneja explains what will separate the winners from the losers He maintains the leaders will be the airlines that 1 exploit this crisis driven change to their best advantage 2 learn to work around the airline inherent constraints that prevent them from running their businesses just like other businesses 3 learn from successes and failures of other global enterprises 4 sharpen their business intelligence analytics and strategic agility and 5 proactively explore the pockets of growth in this emerging markets century To help airline executives become informed of new competitive games the author analyzes numerous business sectors such as auto hospitality retail technology and entertainment For example relevant lessons can be learned from the strategic mistakes made by the US automakers Likewise emergent and compelling insights can be gained in superior customer experience from Ritz Carlton and Zappos and in value creating innovation from Cirque du Soleil and Zipcar The book also features a multitude of forewords from airlines and related businesses to provide readers with multiple perspectives on the changing landscape in the global airline industry Nawal Taneja is a career analyst of the global airline industry with wide ranging experience in the aviation industry academia and public policy Encouraged by industry executives he has written five other books for practitioners in the global airline industry including **FASTEN YOUR SEATBELT The Passenger is Flying the Plane and Flying Ahead of the Airplane**

Anna Llort Escote, 2010 At a time when airline business is facing a very competitive period the strategy took up to shape the future is crucial. Airlines need to continuously invest in innovative IT solutions which enable them to improve and optimize specific processes rapidly. Amadeus IT Group provides an extended variety of pioneering IT and Distribution Solutions to this market. Alt a Departure Control Systems DCS are the Amadeus solutions designed to automate key airport services. The purpose of this master thesis was to specify design and implement a working prototype of an interface that integrates two airport IT Solutions Alt a Departure Control Flight and Alt a Baggage Reconciliation System BRS. The prototype's main goal was to demonstrate a usable interface between the two systems providing benefits to airlines in terms of weight and balance engineering operations and a complete baggage tracking. The first phase of this project involved to become familiar with both systems from goals to functionalities. Afterwards a complete pre study was dedicated to investigating message formats in the airline industry and current flows of information between Alt a DCS. In addition a user study was conducted mainly focusing on agents activities concerning loading processes to determine the needs and requirements of the FM BRS Interface users. Functional requirements were gathered from various meetings in which team members representatives from both teams attended. The prototype was evaluated in different test environments with expert representatives from Customer Management Baggage Team and Flight Management Team. The result of the 6 month thesis is a first prototype of a standalone interface which tolerates a flow of communications not only between these two Amadeus Systems but also with other DCS or BRS. A qualitative analysis shows the benefits that can be archived if the interface is implemented by airlines. The analysis conclusions are used to assess results obtained whilst testing the prototype. To conclude a feasibility study suggested that further work needs to be put in the prototype in terms of functionalities and messages format selection.
