

## Chapter 5 -- Elasticity and Its Application

In this chapter, look for the answers to these questions:

- What is elasticity? What kinds of factors can elasticity help us understand?
- What is the price elasticity of demand? How is it related to the demand curve? How is it related to demand's responsiveness?
- What is the price elasticity of supply? How is it related to the supply curve?
- What are the income and cross-price elasticities of demand?

It interests...

How large will the loss be from a decrease in the number of customers per hour?

How large will the loss be from a decrease in the number of customers per hour? How large will the loss be from a decrease in the number of customers per hour? How large will the loss be from a decrease in the number of customers per hour?

How large will the loss be from a decrease in the number of customers per hour? How large will the loss be from a decrease in the number of customers per hour? How large will the loss be from a decrease in the number of customers per hour?

Examples:

- Suppose that a decrease in the number of customers per hour from 100 to 80 causes a decrease in the number of customers per hour from 100 to 80. The percentage change in the number of customers per hour is 20%. The percentage change in the number of customers per hour is 20%.
- Suppose that a decrease in the number of customers per hour from 100 to 80 causes a decrease in the number of customers per hour from 100 to 80. The percentage change in the number of customers per hour is 20%. The percentage change in the number of customers per hour is 20%.

Price Elasticity of Demand

- Price elasticity of demand measures how much  $Q^D$  responds to a change in  $P$ .
- Formula for the price elasticity of demand:

$$\text{Price elasticity of demand} = \frac{\text{Percentage change in } Q^D}{\text{Percentage change in } P}$$

Along a demand curve, a decrease in price causes a decrease in quantity demanded. The percentage change in price is negative, and the percentage change in quantity demanded is positive.

Example:

The demand curve for a good is downward-sloping. A decrease in price causes a decrease in quantity demanded.

Calculating Percentage Changes

Price falls from \$10 to \$9. Quantity demanded rises from 100 to 110.

Percentage change in price =  $\frac{9 - 10}{10} = -10\%$ . Percentage change in quantity demanded =  $\frac{110 - 100}{100} = 10\%$ .
