You'll start with an introduction to algorithmic trading along with setting up the environment required to perform the tasks in the book. You'll explore the key components of an algorithmic trading business and aspects you'll need to take into account before starting an automated trading project. Next, you'll focus on designing, building, and operating the components required for developing a practical and profitable algorithmic trading business. Later, you'll learn how quantitative trading signals and strategies are developed and also implemented and analyze sophisticated trading strategies such as volatility strategies, economic release strategies, and statistical arbitrage. Finally, you'll create a trading bot from scratch using the algorithms built in the previous sections. By the end of this book, you'll be well-versed with electronic trading markets and have learned to implement, evaluate, and safely operate algorithmic trading strategies in live markets.

What you will learn:

- Understand the components of modern algorithmic trading systems and strategies.
- Apply machine learning in algorithmic trading signals and strategies using Python.
- Build, visualize, and analyze trading strategies based on mean reversion, trend, economic releases, and more.
- Quantify and build a risk management system for Python trading strategies.
- Build a backtester to run simulated trading strategies for improving the performance of your trading bot.
- Deploy and incorporate trading strategies in the live market to maintain and improve profitability.

Who this book is for: This book is for software engineers, financial traders, data analysts, and entrepreneurs. Anyone who wants to get started with algorithmic trading and understand how it works and learn the components of a trading system, protocols, and algorithms required for black box and gray box trading, and techniques for building a completely automated and profitable trading business will also find this book useful.
