Ecological Studies in the Antarctic Sea Ice Zone Wolf E. Arntz, Andrew Clarke, 2012-12-06 Ten years ago Polar Biology published the book Weddell Sea Ecology containing the European Polarstern study EPOS in the Weddell Sea and Peninsula waters 1988-89. In certain respects the present collection of papers first published in Polar Biology in 2001 is a follow up as it combines papers partly based on three Polarstern expeditions to the same region. Further articles relate to both land based and shipborne studies again primarily in the Atlantic sector and around the Antarctic Peninsula. The SCAR programme Ecology of the Antarctic Sea Ice Zone EASIZ served as an umbrella for a truly international cooperation. Although funding came exclusively from national sources 40% of the scientists on board Polarstern were foreigners. Out of the 35 papers of the present volume not less than 14 papers have multinational authorship. The scope of EASIZ is wider than the Southern Ocean Studies in JGOFS and GLOBEC. The Contents reflect emphasis on the study of benthos which hitherto had not received the necessary attention in the attempt to understand key questions of evolution and zoogeography of fauna from the Southern Hemisphere. The information collected under EASIZ enhanced greatly our recognition of the rather high biodiversity of the Antarctic shelf benthos. In order to extend these studies to the deeper continental slopes and the deep sea Polarstern is presently on her way for the first international survey of deep sea benthos in the Atlantic sector of the Southern Ocean.

Adaptation and Evolution in Marine Environments, Volume 1 Guido di Prisco, Cinzia Verde, 2012-03-01 The poles undergo climate changes exceeding those in the rest of the world in terms of their speed and extent and have a key role in modulating the climate of the Earth. Ecosystems adapted to polar environments are likely to become vulnerable to climate changes. Their responses allow us to analyse and foresee the impact of changes at lower latitudes. We need to increase our knowledge of the polar marine fauna of continental shelves, slopes and deep sea as identifying the responses of species and communities is crucial to establishing efficient strategies against threats to biodiversity using international and cross disciplinary approaches. The IPY 2007-2009 was a scientific milestone. The outstanding contribution of Marine Biology is reflected in this volume and the next one on Adaptation and Evolution in Marine Environments: The Impacts of Global Change on Biodiversity from the series From Pole to Pole making these volumes a unique and invaluable component of the scientific outcome of the IPY.

**Antarctic Ecosystems** Alex D. Rogers, Nadine M. Johnston, Eugene J. Murphy, Andrew Clarke, 2012-02-28 Since its discovery Antarctica has held a deep fascination for biologists. Extreme environmental conditions, seasonality and isolation have led to some of the most striking examples of natural selection and adaptation on Earth. Paradoxically, some of these adaptations may pose constraints on the ability of the Antarctic biota to respond to climate change. Parts of Antarctica are showing some of the largest changes in temperature and other environmental conditions in the world. In this volume, published in association with the Royal Society, leading polar scientists present a synthesis of the latest research on the biological systems in Antarctica, covering organisms from microbes to vertebrate higher predators. This book comes at a time

when new technologies and approaches allow the implications of climate change and other direct human impacts on Antarctica to be viewed at a range of scales across entire regions whole ecosystems and down to the level of species and variation within their genomes Chapters address both Antarctic terrestrial and marine ecosystems and the scientific and management challenges of the future are explored Biodiversity Hotspots Through Time Royal Society (Great Britain).
