Risk Allocation and Distributive Justice in the Energy Industry Smith I

Azubuike, 2024-09-30 Brings the concept of gross negligence to the fore and highlights how distributive justice forms a better foundation for risk allocation in the offshore energy industry. Assessed the practice of risk allocation in gross negligence cases in offshore petroleum drilling contracts. Presented a public policy perspective on risk allocation in offshore drilling contracts. Discussed gross negligence as a *sui generis* risk and provides a definitional pathway for determining when gross negligence has occurred and how it should apply to offshore energy drilling contracts to encourage a pollution free drilling operation. Advanced the concept of distributive justice as a basis for risk allocation between participants when a downside arises due to gross negligence. This book examines the practice of risk allocation in the offshore energy industry through the public policy lens and offers a novel perspective on the concept of gross negligence in risk allocation. This perspective is founded on the proportionality element of distributive justice in burden distribution. The assessment of how mutual indemnity clauses apply as an absolute shield against liability arising from gross negligence reveals that moral hazard can result from the practice. In the analysis this book considers the risk allocation practice in PSC and Concession regimes and how parties liability is determined in drilling contracts. This book considers gross negligence a *sui generis* risk and provides a definitional

pathway for determining when gross negligence occurs and how it should apply to offshore drilling contracts. Thus it advances an environmental sustainability approach to offshore petroleum drilling operations. This book will be useful to operators and contractors, resource rich countries, insurance companies, practitioners, scholars and academics interested in risk allocation in the petroleum industry. **A Review of Alternate Energy Sources** Thomas H. Catalysis for Clean Energy and Environmental Sustainability K. K. Pant, Sanjay Kumar Gupta, Ejaz Ahmad, 2021-04-01. This book is part of a two volume work that offers a unique blend of information on realistic evaluations of catalyst based synthesis processes using green chemistry principles and the environmental sustainability applications of such processes for biomass conversion, refining and petrochemical production. The volumes provide a comprehensive resource of state of the art technologies and green chemistry methodologies from researchers, academics and chemical and manufacturing industrial scientists. The work will be of interest to professors, researchers and practitioners in clean energy, catalysis, green chemistry, chemical engineering and manufacturing and environmental sustainability. This volume focuses on catalyst synthesis and green chemistry applications for petrochemical and refining processes. While most books on the subject focus on catalyst use for conventional crude fuel oriented refineries, this book emphasizes recent transitions to petrochemical refineries with the goal of evaluating how green chemistry applications can produce clean energy through petrochemical industrial means. The majority of the chapters are contributed by industrial researchers and technicians and address various petrochemical processes including hydrotreating, hydrocracking, flue gas treatment and isomerization catalysts.
