Iterative Incomplete Factorization Methods:

Iterative Incomplete Factorization Methods Valery P Il'in, 1992-07-23 This book is devoted to numerical methods for solving sparse linear algebra systems of very large dimension which arise in the implementation of the mesh approximations of the partial differential equations Incomplete factorization is the basis of the wide class of preconditioning iterative processes with acceleration by conjugate gradients or the Chebyshev technique Different kinds of explicit and implicit algorithms are considered Theoretical grounds of correctness and estimates of the convergence velocity of iterations are presented Together with the results of experimental investigations for the typical examples this book is the first on systematic studying of the incomplete factorization methods

Iterative Methods and Preconditioning for Large and Sparse Linear Systems with Applications Daniele Bertaccini, Fabio Durastante, 2018-02-19 This book describes in a basic way the most useful and effective iterative solvers and appropriate preconditioning techniques for some of the most important classes of large and sparse linear systems The solution of large and sparse linear systems is the most time consuming part for most of the scientific computing simulations Indeed mathematical models become more and more accurate by including a greater volume of data but this requires the solution of larger and harder algebraic systems In recent years research has focused on the efficient solution of large sparse and or structured systems generated by the discretization of numerical models by using iterative solvers

Computer Algorithms for Solving Linear Algebraic Equations Emilio Spedicato, 2012-12-06 The NATO Advanced Study Institute on Computer algorithms for solving linear algebraic equations the state of the art was held September 9 21 1990 at II Ciocco Barga Italy It was attended by 68 students among them many well known specialists in related fields from the following countries Belgium Brazil Canada Czechoslovakia Denmark France Germany Greece Holland Hungary Italy Portugal Spain Turkey UK USA USSR Yugoslavia Solving linear equations is a fundamental task in most of computational mathematics Linear systems which are now encountered in practice may be of very large dimension and their solution can still be a challenge in terms of the requirements of accuracy or reasonable computational time With the advent of supercomputers with vector and parallel features algorithms which were previously formulated in a framework of sequential operations often need a completely new formulation and algorithms that were not recommended in a sequential framework may become the best choice The aim of the ASI was to present the state of the art in this field While not all important aspects could be covered for instance there is no presentation of methods using interval arithmetic or symbolic computation we believe that most important topics were considered many of them by leading specialists who have contributed substantially to the developments in these fields

Scientific and Engineering Computations for the 21st Century - Methodologies and Applications M. Mori,T. Mitsui,2002-12-03 The 20th century saw tremendous achievements and progress in science and technology Undoubtedly computers and computer related technologies acted as one of vital catalysts for accelerating this progress in the latter half of the century The contributions of mathematical sciences have been equally profound and the synergy between mathematics and computer science has played a key role in accelerating the progress of both fields as well as science and engineering Mathematical sciences will undoubtedly continue to play this vital role in this new century In particular mathematical modeling and numerical simulation will continue to be among the essential methodologies for solving massive and complex problems that arise in science engineering and manufacturing Underpinning this all from a sound theoretical perspective will be numerical algorithms In recognition of this observation this volume focuses on the following specific topics 1 Fundamental numerical algorithms 2 Applications of numerical algorithms 3 Emerging technologies The articles included in this issue by experts on advanced scientific and engineering computations

from numerous countries elucidate state of the art achievements in these three topics from various angles and suggest the future directions Although we cannot hope to cover all the aspects in scientific and engineering computations we hope that the articles will interest inform and inspire members of the science and engineering community
