Advances

in Hard-to-Cut Materials Grzegorz M. Królczyk, Radosław W. Maruda, Szymon Wojciechowski, 2020-03-13 The rapid growth of modern industry has resulted in a growing demand for construction materials with excellent operational properties. However, the improved features of these materials can significantly hinder their manufacture and therefore they can be defined as hard to cut. The main difficulties during the manufacturing processing of hard to cut materials are attributed especially to their high hardness and abrasion resistance, high strength at room or elevated temperatures, increased thermal conductivity as well as resistance to oxidation and corrosion. Nowadays the group of hard to cut materials is extensive and still expanding, which is attributed to the development of novel manufacturing techniques, e.g., additive technologies. Currently the group of hard to cut materials mainly includes hardened and stainless steels, titanium, cobalt and nickel alloys, composites, ceramics as well as the hard clads fabricated by additive techniques. This Special Issue, *Advances in Hard to Cut Materials: Manufacturing Properties, Process, Mechanics and Evaluation of Surface Integrity*, provides the collection of research papers regarding the various problems correlated with hard to cut materials. The analysis of these studies reveals the primary directions regarding the developments in manufacturing methods, characterization and optimization of hard to cut materials.
