## **Advanced Modeling Techniques In Structural Design:**

*Advanced Modelling Techniques in Structural Design* Feng Fu, 2015-04-07 The successful design and construction of iconic new buildings relies on a range of advanced technologies in particular on advanced modelling techniques In response to the increasingly complex buildings demanded by clients and architects structural engineers have developed a range of sophisticated modelling software to carry out the necessary structural analysis and design work Advanced Modelling Techniques in Structural Design introduces numerical analysis methods to both students and design practitioners It illustrates the modelling techniques used to solve structural design problems covering most of the issues that an engineer might face including lateral stability design of tall buildings earthquake progressive collapse fire blast and vibration analysis non linear geometric analysis and buckling analysis Resolution of these design problems are demonstrated using a range of prestigious projects around the world including the Buji Khalifa Willis Towers Taipei 101 the Gherkin Millennium Bridge Millau viaduct and the Forth Bridge illustrating the practical steps required to begin a modelling exercise and showing how to select appropriate software tools to address specific design problems

**Design and Analysis of Tall and Complex Structures** Feng Fu, 2018-02-01 The design of tall buildings and complex structures involves challenging activities including scheme design modelling structural analysis and detailed design This book provides structural designers with a systematic approach to anticipate and solve issues for tall buildings and complex structures This book begins with a clear and rigorous exposition of theories behind designing tall buildings After this is an explanation of basic issues encountered in the design process This is followed by chapters concerning the design and analysis of tall building with different lateral stability systems such as MRF shear wall core outrigger bracing tube system diagrid system and mega frame The final three chapters explain the design principles and analysis methods for complex and special structures With this book researchers and designers will find a valuable reference on topics such as tall building systems structure with complex geometry Tensegrity structures membrane structures and offshore structures Numerous worked through examples of existing prestigious projects around the world such as Jeddah Tower Shanghai Tower and Petronas Tower etc are provided to assist the reader's understanding of the topic Provides the latest modelling methods in design such as BIM and Parametric Modelling technique Detailed explanations of widely used programs in current design practice such as SAP2000 ETABS ANSYS and Rhino Modelling case studies for all types of tall buildings and complex structures such as Buttressed Core system diagrid system Tube system Tensile structures and offshore structures etc

Computer-Aided Materials Selection During Structural Design National Research Council, Division on Engineering and Physical Sciences, National Materials Advisory Board, Commission on Engineering and Technical Systems, Committee on Application of Expert Systems to Materials Selection During Structural Design, 1995-05-03 The selection of the proper materials for a structural component is a critical activity that is governed by many often conflicting factors Incorporating materials expert systems into CAD CAM operations could assist designers by

suggesting potential manufacturing processes for particular products to facilitate concurrent engineering recommending various materials for a specific part based on a given set of characteristics or proposing possible modifications of a design if suitable materials for a particular part do not exist This book reviews the structural design process determines the elements and capabilities required for a materials selection expert system to assist design engineers and recommends the areas of expert system and materials modeling research and development required to devise a materials specific design system
