Fenrick, 2012-12-06 In this presentation of the Galois correspondence modern theories of groups and fields are used to study problems some of which date back to the ancient Greeks The techniques used to solve these problems rather than the solutions themselves are of primary importance The ancient Greeks were concerned with constructibility problems For example they tried to determine if it was possible using straightedge and compass alone to perform any of the following tasks 1 Double an arbitrary cube in particular construct a cube with volume twice that of the unit cube 2 Trisect an arbitrary angle 3 Square an arbitrary circle in particular construct a square with area  $1/r$  4 Construct a regular polygon with  $n$  sides for  $n \geq 2$  If we define a real number  $c$  to be constructible if and only if the point  $(c, 0)$  can be constructed starting with the points  $(0, 0)$  and  $(1, 0)$  then we may show that the set of constructible numbers is a subfield of the field  $\mathbb{R}$  of real numbers containing the field  $\mathbb{Q}$  of rational numbers Such a subfield is called an intermediate field of  $\mathbb{R}/\mathbb{Q}$  We may thus gain insight into the constructibility problems by studying intermediate fields of  $\mathbb{R}/\mathbb{Q}$  In chapter 4 we will show that 1 through 3 are not possible and we will determine necessary and sufficient conditions that the integer  $n$  must satisfy in order that a regular polygon with  $n$  sides be constructible

**Algebra** L. Rédei, 2014-07-21 Compared with the original German edition this volume contains the results of more recent research which have to some extent originated from problems raised in the previous German edition Moreover many minor and some important modifications have been carried out For example paragraphs 2.5 were amended and their order changed On the advice of G. Pickert paragraph 7 has been thoroughly revised Many improvements originate from H. J. Weinert who by

enlisting the services of a working team of the Teachers Training College of Potsdam has subjected large parts of this book to an exact and constructive review This applies particularly to paragraphs 9 50 51 60 63 66 79 92 94 97 and 100 and to the exercises In this connection paragraphs 64 and 79 have had to be partly rewritten in consequence of the correction

**Field Theory and Its Classical Problems** Charles Robert Hadlock, 2000-12-07 An introduction to the classical notions behind modern Galois theory

**Mathematical Tools for Data Mining** Dan A. Simovici, Chabane Djeraba, 2014-03-27 Data mining essentially relies on several mathematical disciplines many of which are presented in this second edition of this book Topics include partially ordered sets combinatorics general topology metric spaces linear spaces graph theory To motivate the reader a significant number of applications of these mathematical tools are included ranging from association rules clustering algorithms classification data constraints logical data analysis etc The book is intended as a reference for researchers and graduate students The current edition is a significant expansion of the first edition We strived to make the book self contained and only a general knowledge of mathematics is required More than 700 exercises are included and they form an integral part of the material Many exercises are in reality supplemental material and their solutions are included

**Landmark Writings in Western Mathematics 1640-1940** Ivor Grattan-Guinness, 2005-02-11 This book contains around 80 articles on major writings in mathematics published between 1640 and 1940 All aspects of mathematics are covered pure and applied probability and statistics foundations and philosophy Sometimes two writings from the same period and the same subject are taken together The biography of the author s is recorded and the circumstances of the preparation of the writing are given When the writing is of some lengths an analytical table of its contents is supplied The contents of the writing is reviewed and its impact described at least for the immediate decades Each article ends with a bibliography of primary and secondary items First book of its kind Covers the period 1640 1940 of massive development in mathematics Describes many of the main writings of mathematics Articles written by specialists in their field

Rings with Polynomial Identities and Finite Dimensional Representations of Algebras Eli Aljadeff, Antonio Giambruno, Claudio Procesi, Amitai Regev, 2020-12-14 A polynomial identity for an algebra or a ring  $A$  is a polynomial in noncommutative variables that vanishes under any evaluation in  $A$  An algebra satisfying a nontrivial polynomial identity is called a PI algebra and this is the main object of study in this book which can be used by graduate students and researchers alike The book is divided into four parts Part 1 contains foundational material on representation theory and noncommutative algebra In addition to setting the stage for the rest of the book this part can be used for an introductory course in noncommutative algebra An expert reader may use Part 1 as reference and start with the main topics in the remaining parts Part 2 discusses the combinatorial aspects of the theory the growth theorem and Shirshov s bases Here methods of representation theory of the symmetric group play a major role Part 3 contains the main body of structure theorems for PI algebras theorems of Kaplansky and Posner the theory of central polynomials M Artin

s theorem on Azumaya algebras and the geometric part on the variety of semisimple representations including the foundations of the theory of Cayley Hamilton algebras Part 4 is devoted first to the proof of the theorem of Razmyslov Kemer and Braun on the nilpotency of the nil radical for finitely generated PI algebras over Noetherian rings then to the theory of Kemer and the Specht problem Finally the authors discuss PI exponent and codimension growth This part uses some nontrivial analytic tools coming from probability theory The appendix presents the counterexamples of Golod and Shafarevich to the Burnside problem [Mathematical Evolutions](#) Abe Shenitzer,John Stillwell,2020-08-03 **Bro-Dart's Catalog of**

[Geometry of Reflecting Rays and Inverse Spectral Problems](#) Vesselin Petkov,Luchezar N. Stoyanov,1992 The behaviour of reflecting rays plays an essential role in many problems of mathematical physics This book studies different geometric properties of reflecting rays for manifolds with smooth boundary and their applications to different inverse spectral and scattering problems This is a developing area in which the authors have made important contributions Results concerning the particular problems studied and which arise in several important domains of modern physics are presented Some chapters concerning the generic properties of reflecting rays can be used for courses for graduate students **Paperbound**
