## **Algebraic Geometry And Arithmetic Curves Oxford Graduate Texts In Mathematics:**

**Algebraic Geometry and Arithmetic Curves** Qing Liu, Reinie Erne, 2006-06-29 This book is a general introduction to the theory of schemes followed by applications to arithmetic surfaces and to the theory of reduction of algebraic curves. The first part introduces basic objects such as schemes, morphisms, base change, local properties, normality, regularity, Zariski's Main Theorem. This is followed by the more global aspect of coherent sheaves and a finiteness theorem for their cohomology groups. Then follows a chapter on sheaves of differentials, dualizing sheaves, and Grothendieck's duality theory. The first part ends with the theorem of Riemann-Roch and its application to the study of smooth projective curves over a field. Singular curves are treated through a detailed study of the Picard group. The second part starts with blowing ups and desingularisation, embedded or not of fibered surfaces over a Dedekind ring, that leads on to intersection theory on arithmetic surfaces. Castelnuovo's criterion is proved and also the existence of the minimal regular model. This leads to the study of reduction of algebraic curves. The case of elliptic curves is studied in detail. The book concludes with the fundamental theorem of stable reduction of Deligne-Mumford. The book is essentially self-contained, including the necessary material on commutative algebra. The prerequisites are therefore few and the book should suit a graduate student. It contains many examples and nearly 600 exercises.

**Algebraic Geometry and Arithmetic Curves** Qing Liu, 2006 **A Course in Real**

**Algebraic Geometry** Claus Scheiderer, 2024-09-12 This textbook is designed for a one year graduate course in real algebraic geometry with a particular focus on positivity and sums of squares of polynomials. The first half of the book features a thorough introduction to ordered fields and real closed fields, including the Tarski-Seidenberg projection theorem and transfer principle. Classical results such as Artin's solution to Hilbert's 17th problem and Hilbert's theorems on sums of squares of polynomials are presented in detail. Other features include careful introductions to the real spectrum and to the geometry of semialgebraic sets. The second part studies Archimedean positivstellensatz in great detail and in various settings together with important applications. The techniques and results presented here are fundamental to contemporary approaches to polynomial optimization. Important results on sums of squares on projective varieties are covered as well. The last part highlights applications to semidefinite programming and polynomial optimization, including recent research on semidefinite representation of convex sets. Written by a leading expert and based on courses taught for several years, the book assumes familiarity with the basics of commutative algebra and algebraic varieties as can be covered in a one semester first course. Over 350 exercises of all levels of difficulty are included in the book.

**Stacks Project Expository Collection (SPEC)** Pieter Belmans, Wei Ho, Aise Johan de Jong, 2022-10-27 A collection of expository articles on modern topics in algebraic geometry focusing on the geometry of algebraic spaces and stacks. **An Invitation to Modern Enumerative Geometry** Andrea T. Ricolfi, 2022-12-14 This book is based on a series of lectures given by the author at SISSA Trieste within the PhD courses Techniques in enumerative geometry 2019 and Localisation in enumerative geometry 2021. The goal of this

book is to provide a gentle introduction aimed mainly at graduate students to the fast growing subject of enumerative geometry and more specifically counting invariants in algebraic geometry In addition to the more advanced techniques explained and applied in full detail to concrete calculations the book contains the proofs of several background results important for the foundations of the theory In this respect this text is conceived for PhD students or research beginners in the field of enumerative geometry or related areas This book can be read as an introduction to Hilbert schemes and Quot schemes on 3 folds but also as an introduction to localisation formulae in enumerative geometry It is meant to be accessible without a strong background in algebraic geometry however three appendices one on deformation theory one on intersection theory one on virtual fundamental classes are meant to help the reader dive deeper into the main material of the book and to make the text itself as self contained as possible **Computer Algebra in Scientific Computing** François

Boulier,Matthew England,Timur M. Sadykov,Evgenii V. Vorozhtsov,2022-08-10 This book constitutes the proceedings of the 24th International Workshop on Computer Algebra in Scientific Computing CASC 2022 which took place in Gebze Turkey in August 2022 The 20 full papers included in this book were carefully reviewed and selected from 32 submissions They focus on the theory of symbolic computation and its implementation in computer algebra systems as well as all other areas of scientific computing with regard to their benefit from or use of computer algebra methods and software

*Néron Models and Base Change* Lars Halvard Halle,Johannes Nicaise,2016-03-02 Presenting the first systematic treatment of the behavior of Néron models under ramified base change this book can be read as an introduction to various subtle invariants and constructions related to Néron models of semi abelian varieties motivated by concrete research problems and complemented with explicit examples Néron models of abelian and semi abelian varieties have become an indispensable tool in algebraic and arithmetic geometry since Néron introduced them in his seminal 1964 paper Applications range from the theory of heights in Diophantine geometry to Hodge theory We focus specifically on Néron component groups Edixhoven's filtration and the base change conductor of Chai and Yu and we study these invariants using various techniques such as models of curves sheaves on Grothendieck sites and non archimedean uniformization We then apply our results to the study of motivic zeta functions of abelian varieties The final chapter contains a list of challenging open questions This book is aimed towards researchers with a background in algebraic and arithmetic geometry

Rational Points on Varieties Bjorn Poonen,2023-08-10 This book is motivated by the problem of determining the set of rational points on a variety but its true goal is to equip readers with a broad range of tools essential for current research in algebraic geometry and number theory The book is unconventional in that it provides concise accounts of many topics instead of a comprehensive account of just one this is intentionally designed to bring readers up to speed rapidly Among the topics included are Brauer groups faithfully flat descent algebraic groups torsors tale and fppf cohomology the Weil conjectures and the Brauer Manin and descent obstructions A final chapter applies all these to study the arithmetic of surfaces The down to earth explanations and the over 100 exercises make the book

suitable for use as a graduate level textbook but even experts will appreciate having a single source covering many aspects of geometry over an unrestricted ground field and containing some material that cannot be found elsewhere The origins of arithmetic or Diophantine geometry can be traced back to antiquity and it remains a lively and wide research domain up to our days The book by Bjorn Poonen a leading expert in the field opens doors to this vast field for many readers with different experiences and backgrounds It leads through various algebraic geometric constructions towards its central subject obstructions to existence of rational points Yuri Manin Max Planck Institute Bonn It is clear that my mathematical life would have been very different if a book like this had been around at the time I was a student Hendrik Lenstra University Leiden Understanding rational points on arbitrary algebraic varieties is the ultimate challenge We have conjectures but few results Poonen's book with its mixture of basic constructions and openings into current research will attract new generations to the Queen of Mathematics Jean Louis Colliot Thélène Université Paris Sud A beautiful subject handled by a master Joseph Silverman Brown University **Local and Global Methods in Algebraic Geometry** Nero Budur, Tommaso de Fernex, Roi Docampo, Kevin Tucker, 2018-07-26 This volume contains the proceedings of the conference Local and Global Methods in Algebraic Geometry held from May 12-15 2016 at the University of Illinois at Chicago in honor of Lawrence Ein's 60th birthday The articles cover a broad range of topics in algebraic geometry and related fields including birational geometry and moduli theory analytic and positive characteristic methods geometry of surfaces singularity theory hyper Kähler geometry rational points and rational curves *Annales Scientifiques de l'École Normale Supérieure* École normale supérieure (France), 2016 **Annales de l'Institut Fourier**, 2014 **Nagoya Mathematical Journal**, 2008 Issue for Mar 1970 dedicated to Professor Katuzi Ono on his 60th birthday with portrait sketch of his life and list of mathematical papers
