The Cumulative Book Index ,1996 A world list of books in the English language Grid Computing Marios D. Dikaiakos,2004-12-07 This book constitutes the thoroughly refereed post proceedings of the Second European AcrossGrid Conference AxGrids 2004 held in Nicosia Cyprus in January 2004 The 27 revised full papers and 4 revised short papers presented were carefully selected during two rounds of reviewing and improvement from 57 submissions The papers address the entire range of current topics in grid computing from computational and data grids to the semantic grid and grid application in various fields *Proceedings of 1996 IEEE Second International Conference on Algorithms & Architectures for Parallel Processing, ICA3PP '96* IEEE Singapore Section,IEEE Singapore Section. Computer Chapter,1996 Lower costs and higher degrees of integration in chip architecture that allow parallel processing are described The impact on parallel processing algorithms is examined with offered solutions Advantages of parallel processing for large computational problems are examined **Lectures in Parallel Computation** Alan Gibbons,Paul Spirakis,1993-03-18 The foundations of parallel computation especially the efficiency of computation are the concern of this book Distinguished international researchers have contributed fifteen chapters which together form a coherent stream taking the reader who has little prior knowledge of the field to a position of being familiar with leading edge issues The book may also function as a source of teaching material and reference for researchers The first part is devoted to the Parallel Random Access Machine P RAM model of parallel computation The initial chapters justify and define the model which is then used for the development of algorithm design in a variety of application areas such as deterministic algorithms randomisation and algorithm resilience The second part deals with distributed memory models of computation The question of efficiently implementing P RAM algorithms within these models is addressed as are the immensely interesting prospects for general purpose parallel computation **Annual ACM Symposium on Parallel Algorithms and Architectures** ,1999 DNA Based Computers II DIMACS (Group),1999 The fledgling field of DNA computers began in 1994 when Leonard Adleman surprised the scientific community by using DNA molecules protein enzymes and chemicals to solve an instance of a hard computational problem This volume presents results from the second annual meeting on DNA computers held at Princeton only one and one half years after Adleman s discovery By drawing on the analogy between DNA computing and cutting edge fields of biology such

as directed evolution this volume highlights some of the exciting progress in the field and builds a strong foundation for the theory of molecular computation
