## **Iterative Algorithms For Multilayer Optimizing Control:**

Iterative Algorithms for Multilayer Optimizing Control Mietek A. Brdys,Piotr Tatjewski,2005 The book presents basic structures concepts and algorithms in the area of multilayer optimizing control of industrial systems as well as the results of the research that was carried out by the authors over the last two decades The methodologies and control algorithms are thoroughly illustrated by numerous simulation examples Also the applications to several case study examples are presented These include ethylene distillation column vaporizer pilot scale plant styrene distillation line consisting of three columns and industrial furnace pilot scale plant A temporal decomposition is applied to the Integrated Wastewater System case study to derive multilayer dynamic optimizing controller with repetitive robust model predictive control mechanism distributed over the layers operating in different time scales

**Transport of Water versus Transport over Water** Carlos Ocampo-Martinez,Rudy R. Negenborn,2015-06-03 This book aims at stimulating discussion between

researchers working on state of the art approaches for operational control and design of transport of water on the one hand and researchers working on state of the art approaches for transport over water on the other hand The main contribution of the book as a whole is to present novel perspectives ultimately leading to the management of an envisioned unified management framework taking the recent advances from both worlds as a baseline The book is intended to be a reference for

control oriented engineers who manage water systems with either or both purposes in mind transport of water transport of goods over water It highlights the possible twofold nature of water projects where water either acts as primary object of study or as a means The book is dedicated to comparing and relating to one another different strategies for operational management and control of different but strongly related systems in the framework of the water In that sense the book presents different approaches treating both the transport of water and transport over water It compares the different approaches within the same field highlighting their distinguishing features and advantages according to selected qualitative indices and demonstrates the interaction and cross relations between both fields It will also help to determine the gaps and common points for both fields towards the design of such a unifying framework which is lacking in the literature Additionally the book looks at case studies where the design of modeling control strategies of either transport of water or transport over water have been proposed discussed or simulated
