Applications Of Heat Pumps To Buildings:

Applications of Heat Pumps to Buildings A. F. C. Sherratt, 1987

Principles of Heating, Ventilation, and Air

Conditioning in Buildings John W. Mitchell, James E. Braun, 2012-03-06 Principles of HVAC in Buildings by J W Mitchell and J E Braun provides foundational knowledge for the behavior and analysis of HVAC systems and related devices. The emphasis is on the application of engineering principles and features a tight integration of physical descriptions with a software program that allows performance to be directly calculated with results that provide insight into actual behavior. The examples end of chapter problems and design projects are more than exercises they represent situations that an engineer might face in practice and are selected to illustrate the complex and integrated nature of an HVAC system or piece of equipment. Coverage of material applicable to the field is broad a Fundamentals section on thermodynamics fluid flow heat transfer and psychometrics types of HVAC systems and components comfort and air quality criteria a Loads section on weather data processing design heating and cooling loads an Equipment section on air and water distribution systems heating and cooling coils cooling towers refrigeration equipment and a Design and Control section on seasonal energy use control techniques supervisory control the HVAC design process and the rules of thumb often used in design. The textbook provides a foundation for students and practicing engineers to design HVAC systems for buildings. In addition there is extensive supplemental on line material that provides more in depth and comprehensive treatment of equipment and component modeling and performance that is geared towards current and future equipment design engineers.

Heat Pumps Takamoto Saito, 2013-10-22 It has long been recognized that realizing the potential for energy conservation and diversification by using heat pumps offers considerable benefits to the environment. Important work on more efficient and ozone friendly working fluids will further enhance the case for greater support of heat pump research. This book contains the Proceedings of the Third International Energy Agency Conference held in Tokyo in March 1990. The main theme of the Conference Heat Pumps Solving Energy and Environmental Challenges is explained in great depth covering not only technical characteristics but economic factors and the role of government and other bodies in promoting research and the uses of all types of heat pumps are also fully considered. As well as publishing the papers presented at the meeting the book also contains the extensive complementary poster sessions from the Conference.

Heat Pumps Walter Grassi, 2017-08-11 The text describes the main features of currently available heat pumps focusing on system operation and interactions with external heat sources. In fact before choosing a heat pump several aspects must be assessed in detail the actual climate of the installation site the building's energy requirements the heating system the type of operation etc. After discussing the general working principles the book describes the main components of compression machines for EHPs GHPs and CO₂ heat pumps. It then addresses absorption heat pumps and provides additional details on the behavior of two fluid mixtures. The book presents a performance comparison for the different types helping designers choose the right one for their needs and

discusses the main refrigerants Notes on helpful additional literature websites and videos also concerning relevant European regulations round out the coverage This book will be of interest to all engineers and technicians whose work involves heat pumps It will also benefit students in energy engineering degree programs who want to deepen their understanding of heat pumps

Sustainability through Energy-Efficient Buildings Amritanshu Shukla,Atul Sharma,2018-03-20 The book covers chapters ranging from introduction to recent technological challenges case studies of energy efficient buildings with policy and awareness issues fundamentals and present status along with research updates and future aspects on topics focusing on energy efficient construction materials Provides comprehensive information on energy efficient buildings including policy and energy audit aspects with case studies Examines application of PCMs in passive heating and cooling in buildings role of active TES and energy saving potential

Energy Conservation Update ,1980 [Refrigeration, Air Conditioning and Heat Pumps Technical Options Committee 2002](#) United Nations Environment Programme,2003-09 The 2002 assessment report produced under the Montreal Protocol on ozone depleting substances finds that technical progress has been made by the refrigeration air conditioning and heat pump industry to comply with requirements to phase out CFCs and in several applications HCFCs as well However there is still a significant amount of installed refrigeration equipment still using CFCs and HCFCs and so service demand remains high and is best minimised by preventive service containment retrofit recovery and recycling

,1922 **Applications and Efficiency of Heat Pump Systems** Ian E. Smith,2013-11-11 The papers in this collection have originated from Britain Eastern and Western Europe and India with the delegates coming from fifteen countries including a strong contingent from Japan This indicates a widespread interest in the application of heat pumps The heat pump suffers from an environmental dichotomy On the one hand it saves fossil fuel energy thereby reducing CO emissions On the other hand in the vapour compression form 2 it generally employs CFCs which are destructive to our protective ozone layer as well as contributing to the greenhouse effect Taking the first heat pumps perhaps have the widest application numerically in the heating and cooling of buildings and an excellent paper describes case studies concerning three large Norwegian hotels In these heat was pumped from the adjacent river or sea when heating was required and during the summer when cooling became necessary to generate domestic hot water The heat pumps were installed by SINTEF Refrigeration Engineering Norway and have demonstrated payback periods of about two years The fractional total energy saving of the three hotels was 30% as a result an impressive figure indeed A similar paper by a Belgian architectural consortium shows how this technique can be successfully applied to the cooling of a large television complex where considerable quantities of heat were being generated by the luminaries In this exercise the cooling load was successfully pumped to provide hot water
