**Applied Data Communications and Networks** B. Buchanan,1996-07-31 The usage of data communications and computer networks are ever increasing. It is one of the few technological areas which brings benefits to most of the countries and the peoples of the world. Without it many industries could not exist. It is the objective of this book to discuss data communications in a readable form that students and professionals all over the world can understand. As much as possible the text uses diagrams to illustrate key points. Most currently available data communications books take their view point from either a computer scientists top down approach or from an electronic engineers bottom up approach. This book takes a practical approach and supports it with a theoretical background to create a textbook which can be used by electronic engineers, computer engineers, computer scientists and industry professionals. It discusses most of the current and future key data communications technologies including Data Communications Standards and Models, Local Area Networks, Ethernet, Token Ring and FDDI, Transmission Control Protocol/Internet Protocol, TCP/IP, High level Data Link Control, HDLC, X.25, Packet switching, Asynchronous Communications, RS 232 and Modems, Pulse Coded Modulation, PCM, Integrated Digital Services Network, ISDN, Asynchronous Transfer Mode, ATM, Error Control, X Windows.
