Coppi, Sergio Bolasco, 1989 This book collects together 45 papers covering various aspects of the analysis of multiway data arrays Mathematical properties of three way and multiway arrays are investigated and their utilization for the statistical interpretation of complex data sets is emphasized The volume is divided into 5 chapters A specific introduction to each chapter has been prepared by the Editorial Board Different methods of analysis are considered including longitudinal and multimode factor analysis generalized canonical analysis multidimensional scaling multiway classification techniques model based approaches The reader can find many original contributions to this area as well as interesting applications in several fields of research such as psychology economics sociology and bio medicine      *Modern Psychometrics with R* Patrick Mair, 2018-09-20 This textbook describes the broadening methodology spectrum of psychological measurement in order to meet the statistical needs of a modern psychologist The way statistics is used and maybe even perceived in psychology has drastically changed over the last few years computationally as well as methodologically R has taken the field of psychology by storm to the point that it can now safely be considered the lingua franca for statistical data analysis in psychology The goal of this book is to give the reader a starting point when analyzing data using a particular method including advanced versions and to hopefully motivate him or her to delve deeper into additional literature on the method Beginning with one of the oldest psychometric model formulations the true score model Mair devotes the early chapters to exploring confirmatory factor analysis modern test theory and a sequence of multivariate exploratory method Subsequent chapters present special techniques useful for modern psychological applications including correlation networks sophisticated parametric clustering techniques longitudinal measurements on a single participant and functional magnetic resonance imaging fMRI data In addition to using real life data sets to demonstrate each method the book also reports each method in three parts first describing when and why to apply it then how to compute the method in R and finally how to present visualize and interpret the results Requiring a basic knowledge of statistical methods and R software but written in a casual tone this text is ideal for graduate students in psychology Relevant courses include methods of scaling latent variable modeling psychometrics for graduate students in Psychology and multivariate methods in the social sciences      Advanced Studies in Behaviormetrics

and Data Science Tadashi Imaizumi, Atsuh Nakayama, Satoru Yokoyama, 2020-04-17 This book focuses on the latest developments in behaviormetrics and data science covering a wide range of topics in data analysis and related areas of data science including analysis of complex data analysis of qualitative data methods for high dimensional data dimensionality reduction visualization of such data multivariate statistical methods analysis of asymmetric relational data and various applications to real data In addition to theoretical and methodological results it also shows how to apply the proposed methods to a variety of problems for example in consumer behavior decision making marketing data and social network structures Moreover it discusses methodological aspects and applications in a wide range of areas such as behaviormetrics behavioral science psychology and marketing management and social sciences Combining methodological advances with real world applications collected from a variety of research fields the book is a valuable resource for researchers and practitioners as well as for applied statisticians and data analysts
