references given therein Rather the emphasis in the present handbook is on technique and we are indeed fortunate that a number of eminent applied mathematicians have been willing to share with us their interpretations and experiences To avoid the necessity of frequent and disruptive cross referencing it is expected that the reader will make full use of the index Moreover each chapter has been made as self sufficient as is feasible This procedure has resulted in occasional duplication but as compensation for this the reader may appreciate the availability of different points of view concerning certain topics of current interest As editor I would like to express my appreciation to the contributing authors to the reviewers to the editorial staff of the publisher and to the many secretaries and typists who have worked on the manuscript without the partnership of all of these people this handbook would not have been possible

Problems in Applied Mathematics Murray S. Klamkin, 1990-01-01 People in all walks of life and perhaps mathematicians especially delight in working on problems for the sheer pleasure of meeting a challenge The problem section of SIAM Review has always provided such a challenge for mathematicians The section was started to offer classroom instructors and their students as well as other interested problemists a set of problems solved or unsolved illustrating various applications of mathematics In many cases the unsolved problems were eventually solved Problems in Applied Mathematics is a compilation of 380 of SIAM Review's most interesting problems dating back to the journal's inception in 1959 The problems are classified into 22 broad categories including Series Special Functions Integrals Polynomials Probability Combinatorics Matrices and Determinants Optimization Inequalities Ordinary Differential Equations Boundary Value Problems Asymptotics and Approximations Mechanics Graph Theory and Geometry
