

The background of the book cover is a composite image. The top portion features a dark, teal-colored geometric pattern resembling a mechanical linkage or a stylized bridge structure. Below this, the main background is a photograph of a person in a red and yellow jumpsuit diving horizontally from a dark, rocky cliff edge. The diver is positioned in the center-left of the frame. Below the cliff, a lush green valley is visible, containing a small village with several buildings and a winding road. The overall scene is captured from a high angle, looking down at the valley.

Methods for Engineers and Scientists Using MATLAB focuses on the fundamentals of numerical methods while making use of MATLAB software. The book introduces MATLAB early on and incorporates it throughout the chapters to perform symbolic, graphical, and numerical tasks. The text covers a variety of methods from curve fitting to solving ordinary and partial differential equations. Provides fully worked out examples showing all details. Confirms results through the execution of the user-defined function or the script file. Executes built-in functions for reconfirmation when available. Generates plots regularly to shed light on the soundness and significance of the numerical results. Created to be user-friendly and easily understandable. Numerical Methods for Engineers and Scientists Using MATLAB provides background material and a broad introduction to the essentials of MATLAB specifically its use with numerical methods. Building on this foundation, it introduces techniques for solving equations and focuses on curve fitting and interpolation techniques. It addresses numerical differentiation and integration methods, presents numerical methods for solving initial value and boundary value problems, and discusses the matrix eigenvalue problem, which entails numerical methods to approximate a few or all eigenvalues of a matrix. The book then deals with the numerical solution of partial differential equations, specifically those that frequently arise in engineering and science. The book presents a user-defined function or a MATLAB script file for each method, followed by at least one fully worked out example. When available, MATLAB built-in functions are executed for confirmation of the results. A large set of exercises of varying levels of difficulty appears at the end of each chapter. The concise approach with strong up-to-date MATLAB integration provided by this book affords readers a thorough knowledge of the fundamentals of numerical methods utilized in various disciplines.

Numerical Methods for Engineers and Scientists Using MATLAB Ramin S. Esfandiari, 2017. This book provides a pragmatic, methodical, and easy-to-follow presentation of numerical methods and their effective implementation using MATLAB, which is introduced at the outset. Each method is accompanied by at least one fully worked out example showing essential details involved in preliminary hand calculations as well as computations in MATLAB. Publisher description

Loose Leaf for Applied Numerical Methods with Python for Engineers and Scientists Steven C. Chapra, Dr., 2021-10-19. When we first learned to use computers as students in the 1960s, Fortran was the language of choice for most engineering and scientific computations. Over the ensuing half-century, numerous other languages have proven useful for implementing the numerical calculations that are so valuable to our research and teaching. Along with a succession of improved Fortran versions, other languages such as Algol, Basic, Pascal, and C/C++ have all found their way into our computational toolbox. The basic content organization and pedagogy of this book is like our other numerical methods textbooks. In particular, a conversational writing style is intentionally maintained in order to make the book easier to read. This book tries to speak directly to the reader and is designed in part to be a tool for self-teaching. As such, we also believe it will have value outside the classroom for professionals desiring to gain proficiency in both numerical methods and Python.
