Baltimore like many other cities around the globe is redesigning local government policy and programs in order to become a more sustainable city Sustainability as a concept guiding public action encourages city officials to integrate policy and programs addressing the economic environmental and social health of the community City governments including Baltimore have adopted plans to integrate this new priority into local policy and program management Reorienting city policy and programs to address an emergent concern like sustainability requires collaboration between city government and various actors and organizations in the community Collaborative Strategies for Sustainable Cities examines how cities define sustainability and form policy implementation networks to integrate sustainability into city programs Using the city of Baltimore to describe and analyze the involvement of the participants in local sustainability efforts in rich detail Eric S Zeemering argues that when we think about the sustainable city the city government is not the best unit of analysis for our investigations or policy planning Instead policy networks within cities carve out slices of a sustainability agenda define sustainability in their own ways and form implementation networks with city government officials neighborhood and community organizations funders and state and federal agencies in order to achieve specific goals When cities begin to integrate sustainability into policies and programs surveying and understanding competing definitions of sustainability within the community may be central to their success The book's rich array of data including qualitative data from elite interviews and public documents Q methodology and social network analysis will make for an engaging read to scholars of political science or public affairs as well as the interested citizen or policy advocate **Urban Policy Analysis** Terry Nichols
