**Wounded Workers** Penney Kome, 1998 One third of serious workplace injuries in the 1990s can be classified as musculoskeletal injuries MSIs Painful and potentially permanent MSIs are often difficult to treat Despite evidence that applied ergonomics and early intervention can protect workers from these injuries the medical social legal and political responses to MSIs have been ambiguous or even hostile For example even as the number of work related MSIs increases many provinces and states are revising workers compensation regulations to exclude these injuries from coverage MSIs of the hands arms neck and shoulders strike women twice as often as men Among the reasons for this difference women work in jobs that tend to be tedious and repetitive such as data input electronics assembly cashiering sewing and poultry packing most workstations are designed for a so called average male body which forces women to reach awkwardly and domestic duties usually preclude women from resting their hands after the paid work is done Since women's jobs are usually perceived as light work Workers Compensation claims are often disputed by employers Even when a claim is accepted Workers Compensation pays only a fraction of women's already low wages A person who develops an MSI faces a labyrinth of bureaucracy usually walking into one blank wall after another Working Wounded maps out the current situation for patients

caregivers and advocates in Canada and the United States. It reviews current therapies, mainstream and alternative ergonomics, legislation, litigation, union management relations, and the trend towards decompensation.
