**Climate Change 2021 - The Physical Science Basis** Intergovernmental Panel on Climate Change (IPCC), 2023-07-26  
The Working Group I contribution to the Sixth Assessment Report of the Intergovernmental Panel on Climate Change IPCC provides a comprehensive assessment of the physical science basis of climate change. It considers in situ and remote observations, paleoclimate information, understanding of climate drivers and physical, chemical, and biological processes and feedbacks, global and regional climate modelling, advances in methods of analyses, and insights from climate services. It assesses the current state of the climate, human influence on climate in all regions, future climate change, including sea level rise, global warming effects, including extremes, climate information for risk assessment, and regional adaptation, limiting climate change by reaching net zero carbon dioxide emissions, and reducing other greenhouse gas emissions, and benefits for air quality. Multi-omics analysis has emerged as a powerful approach in translational medicine, integrating diverse molecular data to provide a comprehensive understanding of biological systems and disease mechanisms. This Research Topic aims to explore the latest advancements and applications of multi-omics analysis in bridging the gap between basic research and clinical practice. In recent years, technological breakthroughs have enabled the simultaneous profiling of multiple molecular layers, including genomics, transcriptomics, proteomics, metabolomics, and epigenomics. The integration of these diverse data types offers unprecedented insights into complex biological processes and disease pathogenesis. Translational medicine seeks to leverage these insights to improve patient outcomes through more precise diagnostics, prognostics, and therapeutic strategies. Despite the potential of multi-omics approaches, several challenges persist in their application to translational medicine. These include data integration and interpretation, handling high-dimensional datasets, identifying clinically relevant biomarkers, and translating molecular findings into actionable clinical insights. Additionally, standardization of multi-omics protocols, data analysis pipelines, and reporting methods is crucial for reproducibility and clinical implementation. This Research Topic will address these challenges and explore innovative solutions in the field of multi-omics analysis for translational medicine. We welcome contributions that advance our understanding of multi-omics applications in various aspects of healthcare and biomedical research. Themes of interest include, but are not limited to: 1. Novel computational methods for integrating multi-omics data. 2. Machine learning and artificial intelligence approaches in multi-omics analysis. 3. Multi-omics strategies for biomarker discovery and validation. 4. Applications of multi-omics in precision medicine and personalized therapy. 5. Multi-omics approaches in drug discovery and development. 6. Integration of clinical data with multi-omics profiles. 7. Single-cell

and extend the data base resulting in this present volume The bibliography covers the period 1956 1975 primarily although some earlier publications of historical interest are included The citations are not restricted to the English language and documents are listed in many languages and from diverse places of origin All publication formats were accepted so that references will be found to books monographs journal papers and articles theses dissertations reports surveys and the like
