**Interferon-mediated Block in the Cell Cycle and Alteration of Integrin Expression in an in Vitro Model of Sjögren's Syndrome** Patrick J. Daniels, 1999 The sialoadenitis seen in Sj gren s syndrome an idiopathic autoimmune exocrinopathy is characterized by lymphocytic infiltration acinar cell atrophy and diminished salivary flow Increased expressions of laminin a laminin receptor and cytokines are also noted Several in vivo characteristics of the sialoadenitis are also evident in a cytokine treated salivary gland ductal epithelial cell line To elucidate mechanisms of salivary gland pathology the effects of two cytokines interferon gamma and tumor necrosis factor alpha on cell proliferation and expressions of basement membrane proteins and alpha 3 integrin were evaluated in cultured salivary gland cells In cytokine treated cell monolayers immunoprecipitation immunoperoxidase and Western Blot analysis demonstrated a moderate intracellular accumulation of an immature laminin product but not fibronectin or collagen IV concurrent with decreased cell proliferation Results from RNase Protection assays suggested that the laminin accumulation was unlikely due to increased laminin beta chain gene expression Furthermore a significant reduction of glyceraldehyde 3 phosphate dehydrogenase expression was noted with prolonged cytokine treatment suggesting metabolic defects To explore the effects of cytokines on acinar cell pathology cells were grown on Matrigel where they formed acini with polarized nuclei Cytokine treatment arrested cells in G1 phase of the cell cycle as evaluated by flow cytometry which preceded significant morphological changes and decreased viability By immunoprecipitation an altered form of alpha 3 integrin was evident in

cultured acinar cells treated with cytokines for prolonged periods but not in untreated cells Cytokines caused no significant changes in laminin expression in acinar cells From this study it was evident that the combination of interferon gamma and tumor necrosis factor alpha resulted in a block in G1 phase for acinar cells This cell cycle arrest occurred prior to accumulation of the alpha 3 integrin variant or significant degenerative cellular changes Information from the present and previous studies suggest that cytokines may alter adhesion and block cell cycle progression in acinar cells in Sj gren s syndrome sialoadenitis Further studies may help elucidate how these cytokine mediated cellular changes contribute to acinar cell death Journal of the National Cancer Institute ,2000
