Air Pollution Control Engineering Noel de Nevers, 2010-05-07 Air pollution control can be approached from a number of different engineering disciplines environmental, chemical, civil and mechanical. To that end, Noel de Nevers has written an engaging overview of the subject. While based on the fundamentals of chemical engineering, the treatment is accessible to readers with only one year of college chemistry. In addition to discussions of individual air pollutants and the theory and practice of air pollution control devices, de Nevers devotes about half the book to topics that influence device selection and design such as atmospheric models and U.S. air pollution law. The generous number of end-of-chapter problems are designed to develop more complex thinking about the concepts presented and integrate them with readers' personal experience increasing the likelihood of deeper understanding.
