Publishes papers reporting on research and development in optical science and engineering and the practical applications of known optical science engineering and technology *Analysis of process-induced distortions and residual stresses of composite structures* Christian Brauner, 2013 The increased application of composite materials in lightweight structures leads to new integral design of structural parts using the example of an integral composite landing flap of an Airbus A320 aircraft This offers possibilities to simplify the process chain to decrease manufacturing costs and to have fibre fair structural design The critical disadvantage of large integral designs is that process induced deformations are a risk factor during the design phase of the manufacturing process because rework is not always possible Especially the aircraft industry with its demands on high qualities tolerances and the application of hot curing resin systems requires knowledge based methods for virtual process design to avoid time and effort consuming iterations This thesis contributes to the understanding of the mechanism behind process induced distortions and stresses related to the Resin Transfer Moulding RTM manufacturing process The aim is to comprehend the phenomena to identify related parameters and to present compensation strategies

**Aviation and Human Factors** Jose Sanchez-Alarcos,2019-06-19 Air safety is right now at a point where the chances of being killed in an aviation accident are far lower than the chances to winning a jackpot in any of the major lotteries However keeping or improving that performance level requires a critical analysis of some events that despite scarce point to structural failures in the learning process The effect of these failures could increase soon if there is not a clear and right development path This book tries to identify what is wrong why there are things to fix and some human factors principles to keep in aircraft design and operations Features Shows through different events how the system learns through technology practices and regulations and the pitfalls of that learning process Discusses the use of information technology in safety critical environments and why procedural knowledge is not enough Presents air safety management as a successful process but at the same time failures coming from technological and organizational features are shown Offers ways to improve from the human factors side by getting the right lessons from recent events *Engineering* ,1989 **Journal of Engineering Materials and Technology** ,2007
