Kelley,1990 Performance of a 0 27 scale rotor model designed for the AH 64 Apache helicopter alternate rotor was measured in hover and forward flight compared with an AH 64 baseline rotor model Thrust rotor tip Mach number advance ratio and ground proximity were varied In hover at a nominal thrust coefficient of 0 0064 the alternate rotor used about 6 4% less power than the baseline rotor The corresponding thrust increase at this representative hover power condition was approximately 4 5% which represents an equivalent full scale increase in lift capability of about 660 lb Comparable results were noted in forward flight except for the high thrust high speed cases investigated Advance ratio 0 30 where the baseline rotor was slightly superior Reduced performance at the higher thrusts and speeds was probably caused by Reynolds number effects and blade elasticity

Kelley,1987 The hover performance of a 27 percent scale model baseline rotor and advanced rotor with a 3 1 tapered tip TR3 for the AH 64 attack helicopter was investigated in the rotor test cell at the Langley 14 by 22 foot Subsonic Tunnel as part of ongoing efforts to improve rotorcraft efficiency The hover performance of the baseline rotor was compared with that of the TR3 rotor and with that of a previously tested advanced rotor with 5 1 tapered tip TR5 Rotor thrust in hover at a rotor height to rotor diameter ratio of 1 46 was varied over a range of thrust coefficients for rotor tip Mach numbers of 0 63 and 0 57 respectively The rotor with the TR3 blades had improved hover performance as compared with the rotor with the TR5 blades and both the TR3 and TR5 blades were superior to the baseline rotor in terms of figure of merit for the range of thrust coefficients from 0 0020 to 0 0100 The additional margin in performance for the TR3 blades as compared with the TR5 blades was likely due to an increase in blade area and Reynolds number at the blade tip region brought about by the change in taper ratio from 5 1 to 3 1
