The Statistical Relationship Among Number Sense, Computational Fluency, and Montana Comprehensive Assessment System Amy Jo Burland, 2011 According to recent studies less than half of U S students perform at the proficient or advanced levels in mathematics by the time they reach grade 4 and the trend continues through high school In order to improve instruction many districts have adopted scientifically based researched programs such as Response to Intervention RTI which allows for the examination of the effectiveness of the core curriculum that is being used in a school or classroom In addition RTI provides school administrators and teachers with educational tools to identify students who may be at risk of failing and to inform teachers of supplemental instruction needed to build up skills that are identified as weak or lacking Research on early mathematics skills indicates that skills performance at the kindergarten and first grade level may predict performance at later grade levels Providing intervention early has been shown to have a positive effect on students future mathematics success This study investigated the long term predictive validity of

the AIMSweb measures for kindergarten through grade 2 and the Montana Comprehensive Assessment System MontCAS. The kindergarten and grade 1 assessments included the Test of Early Numeracy which measures number sense skills that include Oral Counting, Number Identification, Quantity Discrimination, and Missing Number. The grade 1 and 2 Mathematics Curriculum Based Measures assessed computational fluency. The scores on these K-2 assessments were analyzed to investigate correlations with the grade 3 MontCAS scores of the same students. The results indicated that Number Identification and Quantity Discrimination provided the most explained variance. Overall, the kindergarten scores were stronger indicators of grade 3 performance than the grade 1 scores. A sequential multiple regression model was also used to explore which of the TEN measures along with the hierarchy of tests from kindergarten through grade 2 had the greatest explained variance for the grade 3 MontCAS. The results showed that each test from kindergarten to grade 1 increased the predictability of the grade 3 MontCAS scores; however, the grade 2 scores did not contribute to the predictability of the grade 3 assessment. Overall, Oral Counting indicated the highest explained variance using this model.

Reading & Writing Grade by Grade New Standards (Organization). Primary Literacy Committee, 1999. Kindergarten Unit and End-of-year Benchmark Assessments Teacher's Manual Pearson/Scott Foresman, 2011. Assess knowledge of unit skills, assess writing. Cover. Dynamic Indicators of Basic Early Literacy Skills Roland H. Good, 2003. **Kindergarten Benchmarks**, *The Use of Differentiated Instruction to Improve Student Reading Achievement* Markay Lee Larson, 2013. The purpose of this study was to investigate whether kindergarten students who received differentiated reading instruction would have improved their reading skills more than past students who did not have differentiated reading instruction. Data on two consecutive years of kindergarten classes were averaged and compared. In the differentiated instruction year, the student groupings were everchanging throughout the research period. Historical AIMSweb data was collected from my previous kindergarten students and also my current students. The AIMSweb screening was administered on all kindergarten students in September 2012, January of 2013, and May of 2013. I used benchmarks in Letter Sound Fluency (LSF), Phoneme Segmentation Fluency (PSF), and Non-Sense Word Fluency (NWF). Participants for this study were selected from the population of kindergarten students at a rural elementary school in Minnesota. Results of this study did not demonstrate a greater improvement between using differentiated instruction over the non-differentiated classroom but suggested increased student engagement.
