

Pharmacology Proctored ATI Study Guide

Chapter 1: Pharmacokinetics and Routes of Administration

- **Absorption** (depends on route)
 - Route of admin affects the rate and amount of absorption
- **Oral:**
 - GI pH and emptying time
 - Presence of food in the stomach or intestines
 - Form of meds (liquid/CR)
 - Sit upright or put your chin to your chest to aid in swallowing
- **Sublingual/buccal**
 - Quick absorption systemically through highly vascular mucous membranes
 - Must make sure it is fully absorbed before you eat or drink
- **Inhalation via mouth/nose**
 - Rapid absorption through alveolar capillary networks
 - Metered-dose inhaler: shake and press, inhale for 3-5 seconds and then hold for 10 seconds before exhaling
 - Dry powder: DO NOT SHAKE
- **Intradermal, topical**
 - Slow, gradual absorption
- **SQ/IM**
 - Highly soluble meds have rapid absorption (10-30min), poorly soluble have slower absorption
 - Blood perfusion at site of injection affect absorption
- **IV**
 - Immediate and complete
 - 20 gauge – standard
- **Distribution**
 - Transportation of meds to sites of action by body fluids
 - Plasma binding protein: meds compete for protein binding sites within bloodstream, primarily albumin. The ability of med to bind to protein can affect how much med will leave and travel to target tissues.
- **Metabolism**
 - Primarily occurs in the liver but can take place in the kidney o Factors that influence metabolism:
 - Age (infants/older adults require smaller doses)
 - First pass effect: liver inactivates some meds on first pass through and thus require sublingual or IV route (may need higher dose)
- **Excretion**
 - **Eliminated through the kidneys**
 - Kidney dysfunction can result in elevated levels of medications.
- **Med Response**
 - Maintain plasma levels between minimum effective concentration and the toxic concentration:
