Atom Optics Pierre Meystre, 2001-09-21 Quantum mechanics does away with the distinction between particles and waves and one of the more interesting implications of the wave particle duality the discovery that atoms may be manipulated in ways analogous to the manipulation of light with lenses and mirrors has formed the basis for the relatively new field of atom optics Pierre Meystre's Atom Optics is the first book entirely devoted to this exciting area of research Reference links to the leading journals in the field links to research sites graphics and updates can be found online **Laser Physics and**

Squeezing Peter D. Drummond, Zbigniew Ficek, 2013-03-14 The concept of squeezing is intimately related to the idea of vacuum fluctuations once thought to place an absolute limit to the accuracy of measurement However vacuum fluctuations are not unchangeable By recognizing that these quantum fluctuations always occur in two complementary observables physicists have been able to make an intriguing trade off Reduced fluctuations in one variable can be realized at the expense of increased fluctuations in another according to Heisenberg This Heisenberg horse trade originally predicted by theorists was first accomplished experimentally by R Slusher in 1985 Since then the various techniques and applications of quantum squeezing have metamorphosed into a central tool in the wider field of quantum information This book is a summary of the main ideas methods and applications of quantum squeezing written by those responsible for some of the chief developments in the field The book is divided into three parts to recognize that there are three areas in this research These are the fundamental physics of quantum fluctuations the techniques of generating squeezed radiation and the potential applications Part I of the book giving the fundamentals is arranged as follows Chapter 1 introduces the basic ideas about what squeezing of quantum fluctuations is from the quantized free field perspective This chapter establishes the definitions and notations used throughout Chapter 2 explains how to quantize radiation in a dielectric which is the basic technique that is used to make squeezed radiation Laser Spectroscopy - Proceedings Of The Xix International Conference Ken'ichi

Nakagawa, Hidetoshi Katori, Hitoki Yoneda, Fujio Shimizu, 2010-02-10 The XIX International Conference on Laser Spectroscopy one of the leading conferences in the very diverse and still growing field of laser spectroscopy was held in Hokkaido Japan on June 7-12 2009 This volume comprising a collection of invited contributions presented at the conference will report on the latest developments in the area of laser spectroscopy and related fields cold atoms and molecules degenerate quantum gases quantum optics quantum information processing precision measurements atomic clock ultra fast lasers and strong field phenomena and novel spectroscopic applications **Interferometry** Ivan Padron, 2012-03-21 This

book provides the most recent studies on interferometry and its applications in science and technology. It is an outline of theoretical and experimental aspects of interferometry and their applications. The book is divided in two sections. The first one is an overview of different interferometry techniques and their general applications while the second section is devoted to more specific interferometry applications comprising from interferometry for magnetic fusion plasmas to interferometry in wireless networks. The book is an excellent reference of current interferometry applications in science and technology. It offers the opportunity to increase our knowledge about interferometry and encourage researchers in development of new applications.

Frontiers and Advances in Molecular Spectroscopy Jaan Laane, 2017-11-13. *Frontiers and Advances in Molecular Spectroscopy* once again brings together the most eminent scientists from around the world to describe their work at the cutting edge of molecular spectroscopy. Much of what we know about atoms, molecules, and the nature of matter has been obtained using spectroscopy over the last one hundred years or so. Going far beyond the topics discussed in Jaan Laane's earlier book on the subject, these chapters describe new methodologies and applications, instrumental developments, and theory which are taking spectroscopy into still new frontiers. The robust range of topics once again demonstrates the wide utility of spectroscopic techniques. New topics include ultrafast spectroscopy of the transition state, SERS, far-UV spectroscopy, femtosecond coherent anti-Stokes Raman spectroscopy, high-resolution laser-induced fluorescence spectroscopy, Raman spectroscopy, and biosensors, vibrational optical activity, ultrafast two-dimensional spectroscopy, biology with x-ray lasers, isomerization dynamics, and hydrogen bonding, single-molecule imaging, spectra of intermediates, matrix isolation spectroscopy, and more. Covers spectroscopic investigations on the cutting edge of science. Written and edited by leading experts in their respective fields. Allows researchers to access a broad range of essential modern spectroscopy content from a single source rather than wading through hundreds of scattered journal articles.

Atoms in Plasmas Valery S. Lisitsa, 2012-12-06. *Atoms in Plasmas* is concerned with radiative collisional phenomena in neutral and ionized gases. Central to the studies is a perturbed atom that is an atom under the influence of different perturbations in plasmas, namely by electrical and magnetic fields, fields of plasma oscillations, laser and Planck radiation fields, collisions with excited particles, stochastic accelerations, etc. The treatment covers fundamental aspects of modern physics such as atomic quantum mechanics and quantum optics, radiation and collisional processes in plasmas and gases, nonlinear laser spectroscopy, plasma diagnostics, etc.

Atoms in Plasmas Valeriy Lisitsa, 2011-12-22. A study of radiative collisional phenomena in neutral and ionized gases focusing on a perturbed atom, i.e., an atom under the influence of different perturbations in plasmas, namely by electrical and magnetic fields. The treatment covers fundamental aspects of modern physics such as atomic quantum mechanics and quantum optics, radiation and collisional processes in plasmas and gases, nonlinear laser spectroscopy, and plasma diagnostics.
